120 volts, 60 cycles
2.0 amperes at 120 volts
Inductive reactance 60 ohms
D-C resistance 4.0 ohms
Inductance 0.16 henrys

Designed to provide a convenient inductive load which can be made adjustable when used in conjunction with a POWERSTAT variable transformer. Used primarily for testing apparatus at various lagging power factors, i.e., to simulate an inductive load. Essentially consists of a gapped, strip-wound silicon steel toroid core, wire-wound and imbedded in epoxy compound. Entire assembly enclosed in a self-contained, durable, high grade phenolic case having two SUPERIOR 5-WAY binding posts for connections. At 60 cycles, the EXEL has essentially a linear current curve from 0 to nominal 2.0 amperes for continuous duty and up to 3.0 amperes for intermittent duty.

A-C OUTPUT: 0-25 v., 40 amps., 3-phase (Secondary delta connected) / 0-50 v., 25 amps., 3-phase (Secondary wye connected)

D-C OUTPUT: 0-35 v., 50 amps. (Secondary delta connected) / 0-60 v., 30 amps. (Secondary wye connected)

Provides a source of adjustable low a-c or d-c voltage from a-c power lines. Essentially consists of a 3-phase, low voltage POWERSTAT variable transformer combined with a static d-c power supply. Power supply uses highly efficient silicon rectifier cells connected for full-wave 3-phase operation. The a-c and d-c outputs cannot be simultaneously loaded or externally interconnected. The a-c output can be used either single or three-phase.

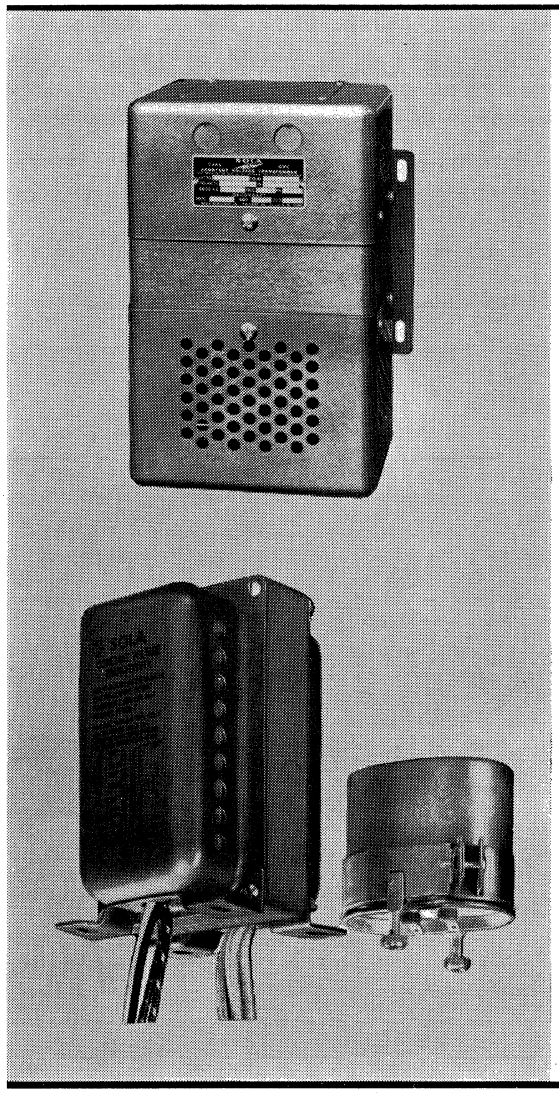
Constant Voltage Transformers

automatic, instantaneous voltage regulators



Sola Constant Voltage Transformers are static-magnetic voltage regulators. They are designed to provide a stabilized output voltage even though the input voltage varies over a considerable range. They have nine distinct advantages over electronic-type regulators or regulators which depend solely upon saturation of core materials for their regulating action:

1. Completely automatic, continuous regulation.
2. Virtually instantaneous response time of 1½ cycles or 25 milliseconds at 60 cycles.
3. Mechanically rugged — as resistant to mechanical shock as a conventional power transformer.
4. No moving or renewable parts — no manual adjustment or maintenance is necessary.
5. Type CVS units have the ability to improve a poor voltage wave-form applied to input terminals.
6. Self-protecting against short circuits on output or load circuit.
7. Inherently incapable of producing an output over-voltage.
8. Current-limiting characteristic protects load equipment from excessive fault currents. Inrush current is held within manufacturers' tolerance, eliminating the need for starting relays.
9. Available in step-up or step-down ratios, permitting substitution in place of conventional, non-regulating transformers.
10. Capable of serving a wide range of electrical devices. Standard catalog items available in 29 different primary-secondary voltage combinations from 60 to 7500 volt-amperes.
11. High degree of isolation between input and output circuit usually eliminates the need for electrostatic shielding. Input and output are isolated both physically and electrically.
12. Relatively compact compared to other equipment for a-c voltage regulation.

Sola static-magnetic transformers are supplied for a number of voltage-regulating requirements. They supply constant voltage in nominal line values, in filament and combination plate-and-filament values, and in variable voltage outputs.

The following pages list the widest range of stock ratings and types offered by any manufacturer of static-magnetic voltage regulators.

Standard Sinusoidal Type (CVS)

± 1% regulation of AC line input for electrical and electronic equipment

Sola Standard Sinusoidal Constant Voltage Transformers regulate voltage within ±1% regardless of input voltage variations as great as ±15%. Displaying fast regulating action, their response time is usually 1.5 cycles or less. With less than 3% total rms harmonic content in their output voltage wave, they are particularly suitable for use with rectifiers or other equipment which is sensitive to, or is affected by, harmonics in the supply voltage. Nine stock ratings are listed. Special designs are available in production quantities.

Normal-Harmonic Type (CVN) — for built-in component use

These units provide the same ±1% regulation as the standard sinusoidal models on Page 2. They have an average of 14% total rms harmonic content in their output voltage. Along with the sinusoidal type, they offer simplicity, reliability and freedom from maintenance. They are reliable sources of voltage for most electrical loads such as filaments, relays, solenoids, other transformers serving ac loads — in fact, all loads not affected by harmonics in the supply voltage. This series includes those mechanical designs specially engineered for use as built-in components. Special designs are available in production quantities.

Electronic Power Type

±1% regulation for filament voltage; ±3% regulation of plate-filament supply

Sola Electronic Power Type Constant Voltage Transformers are designed as components for simple assembly into electronic manufacturers' own product. The filament type provides 6.0 or 6.3 volts output, regulated within ±1% over line voltage variations as great as ±15%. The combination plate-and-filament type provides voltage regulated within ±3% for line voltages varying up to ±15%. Both types provide filaments with stabilized voltage supply, and thus contribute to reliable operation, long life, and reduced service expense for load equipment. Thirteen stock units are listed. Special designs available in production quantities.

Sola "CVQ": transistorized d-c power supply

CVQ offers fast, reliable voltage regulation with this relatively simple, low-cost d-c source, suitable for computers and other voltage-sensitive equipment. Rated for the 120-watt range, this transistorized power supply retains all fundamental advantages of existing SOLA static-magnetic d-c supplies, and adds *shunt-type* transistor control for closer regulation of output voltage. New, unique shunt-circuit design — fully fail-safe and short-circuit proof. Use of Sola static magnetic regulation allows much better efficiency than would be possible with conventional shunt regulated design.

Sola DC power supplies: compact, regulated, for high-amp loads

This combination of a special Sola Constant Voltage Transformer, semi-conductor rectifier, and high-capacitance filter yields a dc power supply compact in size, low in weight, and with other important advantages.

1. Output regulation of ±1% or less with ±10% line voltage variations.
2. Minimum output voltage change with wide, rapid load changes.
3. Low input power, with resultant good efficiency.
4. Ability to withstand high, short-time overloads without damage to components.
5. Ripple voltage of approximately 1% (rms) or less.
6. High overall economy by eliminating overload capacity needed in other types of power supplies for certain applications.
7. Low ratio of size and weight to power output.
8. Freedom from routine adjustment and maintenance.
9. Exceedingly low output impedance.

In addition to its important function of correcting line voltage variations, the Sola CV's inherent current-limiting action permits safe, economical use of the efficient semiconductor rectifier with its low forward voltage drop and other advantages. This same current-limiting action also permits use of high-capacitance filter sections by controlling excessive charging currents which might damage rectifier junctions. The high-capacitance filter yields very low ripple voltage without need for heavy, bulky choke components, with their substantial and often-varying load voltage drops.

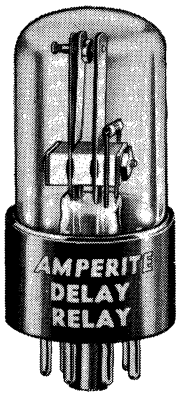
THERMOSTATIC AMPERITE DELAY RELAYS

GLASS ENCLOSED • HERMETICALLY SEALED • A.C., D.C., OR PULSATING CURRENT



STANDARD

AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are actuated by a heater . . can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

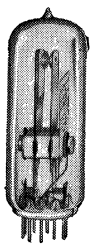
CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 50, 115V.
For 220V use a 6500 ohm-5 watt resistor in series with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.

FLASHERS: 1 watt prox.

VARIATION OF DELAY WITH HEATER VOLTAGE



MINIATURE

FIGURE 1 — Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

CONTACT RATING

	Delay	Contact Rating Non-Inductive	DC Voltage Breakdown Contact-to-Contact	Heater-to-Contact
STANDARD	2 to 10 Sec.	115V — 3a AC	250V	500V
RELAYS	15 to 180 Sec.	115V — 3a AC	800V	800V
		220V — 1a AC	800V	800V
MINIATURE	2 to 10 Sec.	115V — 2a AC	250V	500V
RELAYS	15 to 180 Sec.	115V — 2a AC	800V	800V
		220V — 1a AC	800V	800V
FLASHERS		— ½a AC	250V	500V

CONTACT DROP: —0.1V — Prox. at 1A.

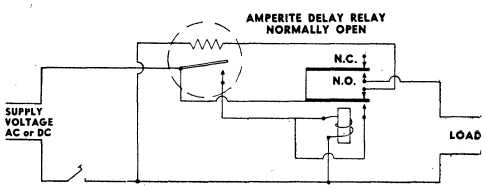
AMBIENT TEMPERATURES: Relays are compensated for temperatures of — 55° to + 80°C. (Relays can be operated from — 80°C to + 125°C without damage). Tolerances given are for 20°C. Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have better ambient compensation than high voltage **heaters.**

DELAYS AVAILABLE: From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 50% by using a resistor in series with the heater. Relays with short delays such as 2 to 5 seconds can be increased 100%.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations.

SHELF LIFE of Amperite Delay Relays is over 10 years. The relay will keep within specification even after being held for 10 years or more.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd. across contacts.



INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a DPDT Magnetic Relay as shown at left. If normally closed is required — use a **normally open** Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG RECYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 8 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

Flashers operate approximately ⅓ on, ⅔ off. The percentage time on can be increased by reducing the voltage of the heater.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. *For example a 6F30 flasher,* has 6.3V heater, normally closed 30 FPM with a ± 10 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from *30 to 90 Flashes per minute* with tolerances as shown in the chart below:

FLASHERS have contact rating of ½a AC, non-inductive.

ELECTRICAL RESET

IR-P.E.R. Micro-finished shaft and Oilite shaft bearing. Positive mechanical stops limit total number of steps in any single unit. Returns automatically to start position when reset coil is energized. **M.E.R.** Direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Positive reset on a pulse as short as 1/100 sec. By interconnecting 2 or more units, count can be increased to any desired total. Will control a sequence of operation and then automatically reset to starting position.

ADD AND SUBTRACT

IR-R.A.S. Non-ferrous shutters control motion of the pawl to extend life of unit and prevent skipping of the ratchet. Steps one step at a time in either direction, depending upon which one of two coils may be energized. **IR-M.A.S.** Midget Add and Subtract Stepper is similar to the R.A.S. in general operation. A zero position switch is opened at home position.

Guardian Steppers are *intermittent duty units* rated at 10% duty cycle (out of each hour), maximum energization single period, 5 minutes. See Chart. Auxiliary switches connected in series with the commutator of the selecting finger may be added to the step and/or reset magnet to increase the normal contact rating.

Series 2210 D.P.S.T.N.O. Contacts: double pole, single throw, normally open. Wt. 10 oz. Size: 2¹¹⁄₁₆" x 2½" x 2³⁄₁₆".

The Guardian Series 2200, D.P.D.T., and the Series 2210, D.P.S.T.N.O., power relays have 25-ampere contacts and *interchangeable* coil assemblies for either relay. Replaceable contact switch parts available for Series 2200, only. These power relays provide a much wider latitude of control for a variety of heavy duty industrial applications including motor starting and heater loads. Series 2200 and 2210 power relays are rated at 25 amperes, continuous duty at 230 volts A.C., with 75% power factor. Operating power requirement for A.C. is 9.5 volt amperes, 60 cycles. Coil drain approximately .080 amperes at 115 volts, 60 cycles. Approximate weight of replacement coil assemblies is 6 ounces.

MOUNTING: 2 holes .196"dia on 1⅞" centers.

Interchangeable Coil Assemblies . . .

(No Solder Connections)

By removing two easily accessible screws, coil assembly can be replaced by coil of another value. Complete instructions for this operation are included with each unit. Solder connections are not required when changing coils.

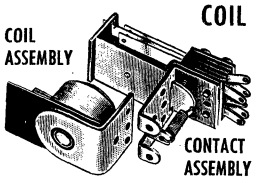
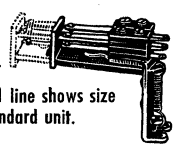
GUARDIAN

SERIES 200 RELAY with completely interchangeable COIL and CONTACT ASSEMBLIES





MIDGET CONTACT ASSEMBLY. Dotted line shows size of standard unit.

Two basic parts—a coil assembly and a contact switch assembly—comprise this simple, yet versatile Guardian relay. The coil assembly consists of the coil and field piece; the contact assembly consists of switch blades, armature, return spring and mounting bracket. The Guardian Midget Contact Assembly is *interchangeable* with the standard Series 200 coil assembly. Available with SPDT, DPDT or 4 PDT contact switch assemblies, each *interchangeable* with all A.C. or D.C. coils.

CONTACT SWITCH PARTS Use contact switch parts 200-3 for adding poles to contact switch assemblies 200-1 and 200-2. Use midget contact switch parts 200-M3 to add poles to midget contact switch assemblies 200-M1 and 200-M2.

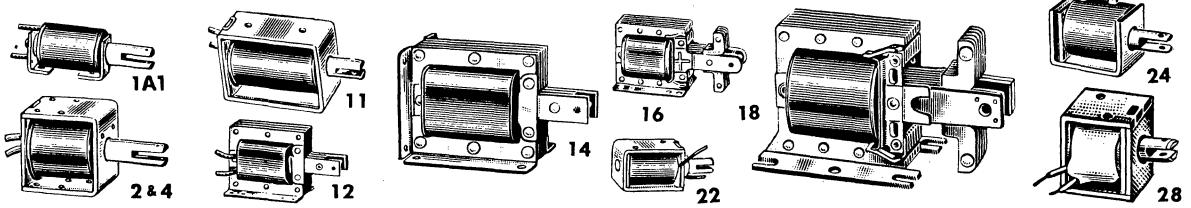
A.C. INDUSTRIAL SOLENOIDS D.C.

INTERMITTENT AND CONTINUOUS

A Complete Line for Every Industrial Application



Intermittent duty solenoids may be specified when the cycle of operations does not require energization of the solenoid coil for more than five consecutive minutes with a sufficient time lapse between operations to permit cooling of the coil to approximately the 24° C. (72° F.) ambient temperature. If energized more frequently and for shorter periods, the cycle should be such that the temperature rise of the coil is not greater than 85° C. (185° F.) at 24° C. ambient temperature. **Continuous duty** solenoids are constructed that they will not exceed a maximum temperature rise of 85° C. above 24° C. ambient temperature under continuous operation, at rated load. Ambient temperature for temperature rise tests on these solenoids has been fixed at 24° C. (72° F.).

Class **88** is basically a clapper type relay that is similar to and interchangeable with many relays made by others. The BIG DIFFERENCE is the Class 88 has been developed to maintain the high standards of reliability users have learned to expect from MAGNECRAFT Telephone Type Relays. The result is reliability, stability of adjustment and long life at reduced cost for a great range of application.

For the first time in a relay of this type, the MAGNECRAFT Class 88 has a rugged, pin type armature hinge with centerless ground stainless steel pin and heavy duty yoke with precision reamed bearing surfaces; this is the hinge design used on the finest telephone type relays to stabilize adjustment through long wear life, reduce friction and improve contact effectiveness. Other features include fiber glass melamine insulation to provide high di-electric strength and greater resistance to humidity and temperature change; independently riveted; ruggedized coil terminals; riveted contacts with built-in contact wipe.

The many refinements plus MAGNECRAFT quality control and inspection standards produce relays so outstanding you can see the difference.

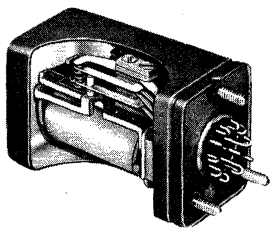
Hermetically Sealed MAGNECRAFT RELAYS



The purpose of hermetic sealing is to provide complete protection against moisture, fungus, corrosive elements, explosive fumes, dust, grit and tampering.

MAGNECRAFT Hermetically Sealed Relays are manufactured to most rigid processing standards, under conditions of cleanliness and sterility that approach the high standards of modern hospitals.

The sealed assemblies are evacuated, purged, evacuated again and then filled with a dry, inert gas to proper working pressures.

When processing is complete each Hermetically Sealed Relay is checked for leaks with a mass spectrometer.

MAGNECRAFT Sealed Relays are permanently labeled with proper identification and wiring diagrams.

Micro-Miniature Rotary Relays

MAGNECRAFT Class 44 Rotary Relays have been developed to provide increased reliability in the crystal can size. Here are a few of many areas in which improvement has been made:

1. Frame and header assembly of rugged bridge-type construction—assures greatly increased resistance to distortion from shock, vibration and temperature—to military specification requirements
2. Balanced armature—minimizes the effect of gravity, shock and vibration on operating reliability.
3. Hinge design—oversize, instrument type bearings at *BOTH* ends.
   a. Minimizes friction for increased sensitivity and greater contact pressure.
   b. Increases operating reliability and life.
4. The latest and finest developments in high temperature insulation.
5. Hermetically sealed in inert gas for maximum protection against severe ambient conditions.

Contact combination: Double Pole, Double Throw
Contact rating: 2 amperes at 28 VDC or 115 VAC, non-inductive.
Operate Time: 5 milliseconds maximum with nominal voltage
Release Time: 3 milliseconds maximum.

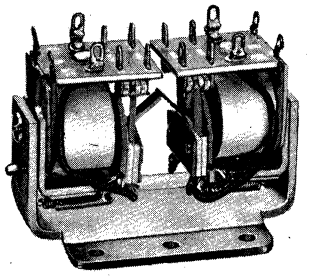
Small AC and DC Latch-in Relays

Two class **88** relays (see page 1) with interlocking latch-in levers mounted on a common base. Each armature latches when pulled in. Energizing one armature releases (resets) the other. Each relay is complete with independent operating coil. Contacts are silver alloy, 10 ampere rating. Relay coils are designed for continuous duty operation. Weight 6½ ounces.



2-11/16 max. x 1¼ x 1-15/16 high max.

Class 88L Latch-in Relays are used in circuits requiring sustained contact function, regardless of change in coil power. A momentary electric pulse pulls in and latches one relay which releases the other. These relays have wide application in

- Memory Circuits
- Protective Circuits
- Overload Devices
- Limit Controls
- Automatic Controls

MAGNEREED RELAYS

In this new approach to enduring relay reliability pre-adjusted gold contacts are hermetically sealed inside a glass capsule in an atmosphere of inert gas. The contacts are actuated magnetically by a coil around the hermetically sealed capsule.

Magnereed Relays have many valuable features:

- Contacts are permanently sealed from dust, contamination and tampering.
- Contact resistance is stabilized over long life.
- Operation is sensitive
- Switching is fast.
- Construction is simple. Magnereed Relays are easily adaptable to mounting configurations as well as grouping to meet multi-pole switching requirements.

SERIES GR GENERAL PURPOSE RELAYS

Includes Plate and Latching Versions

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making connections and mounting. Includes versatile enclosures, also plate and latching versions. Wide commercial & industrial use. **BASIC RELAY ("GR")** All connections terminate on barrier type terminal panel on combination solder-quick-connect (push-on) lugs which accept AMP 110 female connectors. Fixed contacts are integral silver inlay on terminal itself. **CONTACT RATING:** 5 amps at 115 VAC or 32VDC. Terminal panel design permits use of relay in printed circuit assemblies. **CONTACT COMBINATIONS:** 1, 2 or 3 pole, single or double throw (see "Latching Relay" also). Dimensions, $1\frac{5}{16}$ x $1\frac{25}{32}$ x $1\frac{3}{16}$" not including 6-32 threaded mounting stud on relay underside for mtg. on up to ¼" panel. **INSULATION** tested at 1000 VAC. **COIL DRAIN:** DC Relays, 1.4 watts; AC Relays, 2.0 volt-amperes.

ENCLOSED RELAYS (GRTA_, GRTT_, GRTP_) Three types of clear plastic enclosures. Two types are chassis mtg.; one plug-in type. **CHASSIS MOUNTING TYPES: "GRTA"**—("Terminals-Above-Chassis" type) $2\frac{21}{64}$ x $2\frac{1}{4}$ x $1\frac{13}{32}$" overall, has terminal panel opposite to mtg. flange; **"GRTT"**—("Terminals-Through-chassis" type) $2\frac{1}{4}$ x $1\frac{3}{8}$", extends $1\frac{15}{16}$" above chassis, has terminal panel on same end as mtg. flange, requires chassis cutout. **PLUG MTG. TYPE: "GRTP"**—employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The special octal plug base is integral with relay for rigidity—pins meet UL spacing requirements (150V). $2\frac{1}{8}$ x $1\frac{3}{8}$ x $1\frac{3}{8}$" not incl. plug.

PLATE RELAYS—Feature same physical construction as standard general purpose relays but are adjusted for greater sensitivity and can be used as electronic circuit controls, for example, in the plate circuits of vacuum tubes.

LATCHING RELAY—Consists of two GR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without current. Unenclosed type "GRLE", $2\frac{7}{8}$ x $2\frac{1}{32}$ x $1\frac{7}{8}$" overall. Enclosed type "GRLETP" in clear plastic case with Jones plug P-324-SB, $3\frac{11}{16}$ x 3 x $1\frac{1}{2}$" not incl. plug. Plug fits Jones Ser. 324 socket.

MODEL DOSY RELAY

FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc. Other industrial applications may be as an overload or underload control where the relay would be used in a DC circuit in which it is desirable to obtain a signal indication when the control current increases above a predetermined maximum or drops below a predetermined minimum.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, non-inductive load, Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance.

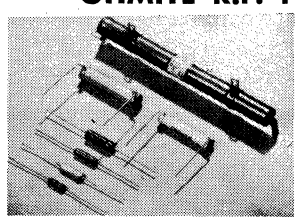
OHMITE R.F. PLATE CHOKES



This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

AEROVOX Resistors

±1% PRECISION ®CARBOFILM AND ®CARBOMOLD RESISTORS

CARBOFILM PRECISION RESISTORS

Precision deposited carbon resistors designed for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. The exclusive Aeroglaze conformal coating offers mechanical protection superior to any other coating eliminating the need for special tubes, sleeves and jackets. Aeroglaze coating will meet all moisture requirements of MIL-R-10509B. Carbofilm resistors offer outstanding stability, low voltage coefficient, low capacitance and inductance in high frequency applications.

CARBOFILM CHARACTERISTICS

TESTING: All Tests conducted in accordance with MIL-R-10509B requirements.

TEMPERATURE COEFFICIENT: Approximately 200 ppm per degree C in the lower resistance ranges and not exceeding 500 ppm per degree C in the highest values specified by MIL-R-10509B.

MOISTURE RESISTANCE: Will meet or surpass the requirements of MIL-R-10509B.

LOAD LIFE: When tested for more than 1,000 hours at full load operation in 40°C ambient temperature, maximum changes are less than 1% with an average change of less than 0.5%.

TEMPERATURE CYCLING: After 5 complete temperature cycles there is an average change of 0.21% with a maximum change of less than 0.5%.

SHORT TIME OVERLOAD: When subjected to 2.5 times the rated working voltage, but not exceeding 2 times the maximum rated voltage for 5 seconds, changes are less than 0.25% with an average change of 0.13%.

LOW TEMPERATURE OPERATION: Maximum changes are less than 1%.

ACCURACY: Guaranteed tolerance of plus/minus 1% at 25°C. (77°F.)

AGING: Due to manufacturing process and control, changes attributed to aging are negligible. The average change in resistance for self-aging is approximately 0.2% per year.

NOISE: Noise level will not exceed .2 microvolts per volt.

VOLTAGE COEFFICIENT: Does not exceed .002% per volt.

CARBOMOLD PRECISION RESISTORS

A superior molded carbon-deposited resistor manufactured under the most exacting quality control standards and specifications assuring excellent performance under the most adverse operating conditions. Resistors are encapsulated in a strong reinforced moisture and heat resistant plastic for added stability, precision and reliability. Rated for full load operation at 70°C and linearly derated to zero load at 150°C. Will meet or exceed insulation resistance requirements of MIL-R-10509C.

CARBOMOLD CHARACTERISTICS

TESTING: All tests conducted in accordance with MIL-R-10509C requirements.

TEMPERATURE COEFFICIENT: Extends from approximately 200 ppm per degree C in the lower resistance ranges to and not exceeding 500 ppm per degree C at the highest values specified by MIL-R-10509C.

MOISTURE RESISTANCE: Will meet or surpass the requirements of MIL-R-10509C.

LOAD LIFE: When tested for more than 1000 hours at full load operation in 70°C ambient temperature, maximum changes less than 1% with an average change of less than 0.5%.

LOW TEMPERATURE OPERATION: Maximum changes are less than 1%.

ACCURACY: Guaranteed tolerance of plus/minus 1% at 25°C.

AGING: Average change in resistance for self-aging, approximately 0.2% in a year.

NOISE: Noise level will not exceed .2 microvolts per volt.

VOLTAGE COEFFICIENT: Does not exceed .002% per volt.

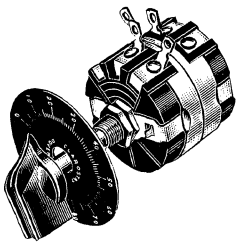
SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre installations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS



Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

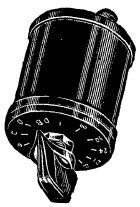
CONSTANT IMPEDANCE OUTPUT ATTENUATORS



Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have ⅜-32 bushing ¾" long, and 1½" round shaft.

Cat. No. CM17084 35 ohm tapered rheostat **Net Price $1.32**

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

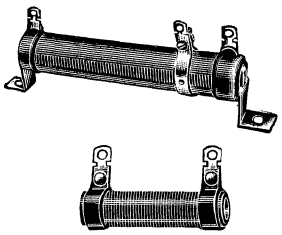
"GREENOHM"* WIRE-WOUND RESISTORS



FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without alterating resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with RETMA standards, overall tolerances are ± 5% for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are ± 10%.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with RETMA standards, overall tolerances are ± 10%.

AXIAL LEAD VITREOUS RESISTORS

Available in three sizes 3, 5 and 10 watts, Series VC3D, VC5E and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is ± 5% for 1 ohm and higher and tolerance below 1 ohm is ± 10%. Attractively packaged in a newly designed carton particularly adapted to this new axial lead resistor, beautifully finished with Clarostat's new vitreous shade of teal green.

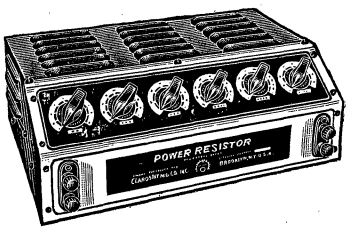
POWER RESISTOR DECADE BOX



The Resistance Decade Box Model No. 240C allows changing resistance at a flip of the switch in a working circuit. Any value obtainable from 1 ohm to 999,999 in steps of one ohm and at a maximum power rating of 225 watts using a maximum of 1000 volts D.C. or 660 volts A.C.

Resistance changing switches are of the type that prevents a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Pointer knobs indicate at a glance the resistance value being used.

Clarostat "Greenohm" resistors are used throughout. These are inorganic-cement-coated wire-wound power resistors. The resistors are mounted on rigid metal supports. A baffle plate separating the resistor bank from the switch assembly protects the latter against heat.

The heavy-gauge metal case is finished in frosted gray wrinkle, with an etched black-and-aluminum front panel. 13 in. long; 8½ in. deep; 5¾ in. high. Weight, 11 lbs.

SUGGESTED USES: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters. Providing any desired ohmage as a universal power resistor.

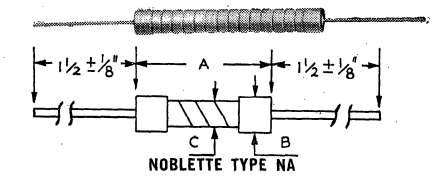
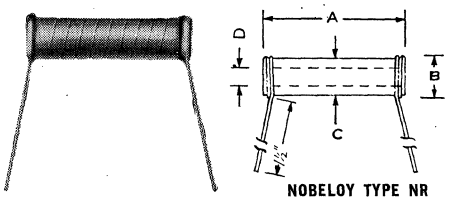
PYROLYTIC METAL FILM



NOBLETTE TYPE NA



NOBELOY TYPE NR

A metallic resistance element is deposited on a low loss ceramic carrier using a pyrochemic process developed and patented by Continental Wirt. A layer of vitreous enamel protects metal film against unusual atmospheric conditions. They are calibrated to value by means of spiralled grooves cut into the film to increase the resistance path. Leads are securely affixed to an extremely low resistance metal contact film, assuring positive contact.

5% and 10% TOLERANCE, ½, 1 and 2 WATT RATINGS

G-H, fixed composition resistors of highest quality, feature permanent electrical characteristics, small physical size for a given wattage rating, great mechanical strength. Leads are differentially tempered--prevent sharp bends near the resistor body while still permitting easy forming to fit a particular wiring arrangement.

Resistor bodies are molded brown phenolic with coding in brilliant colors.

G-H resistors are now supplied in attractive new containers. Three convenient sizes with pull-out sections accommodate standard quantities of ½, 1 and 2 watt resistors.

A G-H innovation, Gold and Silver container ends, permits instant identification of 5% or 10% tolerance units. Quantity, wattage and resistance values are also clearly printed on these ends. These attractive black and green containers with Gold and Silver ends provide a space-saving, functional shelf display.

CUSTOM MANUFACTURED CAPACITORS

PAPER DIELECTRIC

Custom manufactured in any practical capacity, working voltage and tolerance to customers specifications. Containers and terminal arrangements in accord with customers drawings. Capacitors can be manufactured for AC or DC operation—impregnated with Wax, Tensoil, or the stable, highly superior oil impregnant, G-H PERMANOL.

MYLAR* DIELECTRIC

G-H Mylar capacitors are widely used in filters, timing circuits, precision instruments and many other applications where stability and high insulation resistance are requirements. Units can be supplied in film-wrapped types with high grade plastic end-fill or in hermetically sealed tubes or in bathtubs. Standard units are available in 200, 400 and 600 volt types. Intermediate and higher voltage ratings available on special order.

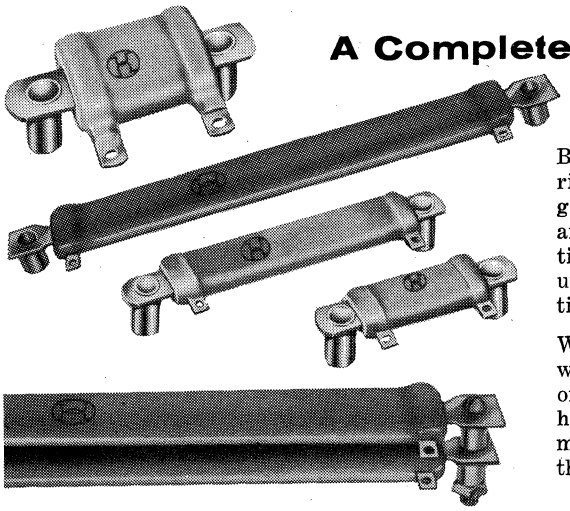
BLUE RIBBON RESISTORS



A Complete Line of Flat and Stack Mounting Power Resistors

Blue Ribbon wire-wound power resistors are made of quality materials with matched coefficients of expansion and are covered by H-H gray vitreous enamel for complete protection against environment and overload. The aluminum through bracket improves heat dissipation, minimizes hot spots, and allows a higher wattage rating per unit of space. Bracket construction facilitates stacking and adds additional space saving.

When BR resistors are stack mounted they must be derated to keep within rated operating temperatures. Watt ratings shown are based on the use of a steel panel 10 inches square x .040 thick supported horizontally. For non-metallic panels reduce rating 15%. When mounted as described in an ambient temperature not exceeding 40°C the maximum temperature rise of the resistor will not exceed 300°C.

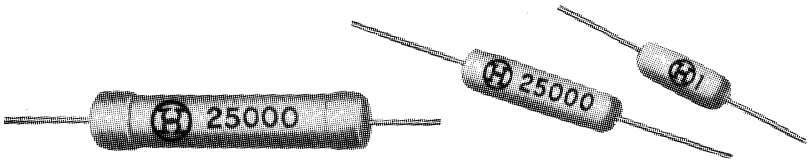
AXIAL-LEAD RESISTORS

The Quality INDUSTRIAL LINE since 1924



The "free air" wattage ratings of these axial lead resistors are based on a hot spot temperature rise of 300°C. (540°F.) in an ambient temperature not exceeding 40°C. (104°F.). These are the finest quality vitreous enameled wire-wound resistors made with application-tested parts and employing precision assembly. Since parts have matched heat expansion, crazing and cracks are eliminated. All welded construction.

Standard Sizes:

Resistor Type	Tube Dimensions A	Tube Dimensions B	Watt Rating Nominal	Recommended Resist. Range Min. ohms	Recommended Resist. Range Max. ohms
5/16 GA	5/16"	1/4"	3 Watts	1	10,000
1 WA	1"	11/32"	5 Watts	1	25,000
1¾ ZA	1¾"	13/32"	10 Watts	1	50,000

Standard tolerance is ±5% for all stock units.

HARDWICK, HINDLE · INC
ADJUSTABLE RESISTORS

The Quality INDUSTRIAL LINE since 1924

This resistor, embodying features originated by Hardwick, Hindle possesses the many advantages of Vitreous Enamel Construction, plus an adjustable feature. The winding is closely and evenly spaced, assuring ample insulation between turns. Where winding is exposed in the track, its underside is tightly embedded in the enamel, the upper surface only being exposed for contact with adjustable band.

Hardwick, Hindle rheostats are exceptionally rugged without being over-designed or dependent on untried principles of construction. They exhibit "market quality" characteristics to meet the most exacting specifications, and special design features assure long life and protection under extremes of humidity and abnormal atmospheric conditions. The "buss bar" contact arm automatically adjusts for complete, continuous contact, and smooth, flexible control. Our blue-gray, high temperature enamel—thermo shock proof—gives increased service life with an extreme factor of safety.

In addition to the complete standard line of rheostats listed at the right, Hardwick, Hindle, Inc. welcomes the opportunity to work with you in the development of rheostats or potentiometers to your specifications. Tapered windings, tandem assemblies, special resistances, and many other electrical or mechanical modifications can be supplied.

Hardwick, Hindle rheostats are packaged one unit per box.

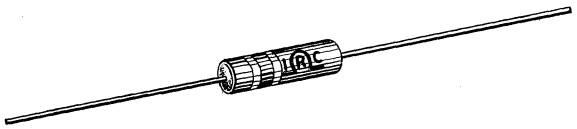
INSULATED RESISTORS

TYPE GBT-SR FIXED COMPOSITION CARBON RESISTORS

More IRC Type GBT-SR Resistors are used in the electronic industry than any other brand of fixed composition resistors. For original equipment, IRC GBT-SR's are by far the leading choice of Electronic Engineers—particularly since the new GBT-½ ½ watt and GBT-1 1 watt give new appearance, new sizes . . . IRC's unsurpassed solderability has been maintained and no wax coating to gum up end equipment. For replacement, Service Technicians favor IRC GBT-SR's over all other brands combined.

IRC's exclusive filament-type resistance element is combined with superior construction features to provide a stable resistor of extremely low operating temperature and excellent power dissipation in a compact, light weight, fully insulated unit.

TYPE BW INSULATED WIRE WOUND RESISTORS



Type BW's are exceptionally stable, inexpensive wire wound resistors for low range requirements. These small, completely insulated units are similar in appearance to insulated composition resistors but are readily identified by the double width of the first color code band.

The wire element is uniformly and tightly wound on an insulated core. Tinned, solid wire leads are keyed to the element by a specially designed terminal. Leads are anchored inside the insulation and cannot turn or pull loose.

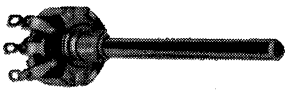
INDUSTRIAL CONTROLS

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact $1\frac{1}{8}$" **Q** Control. Power rating is ½ watt, 500 volts maximum. Electrical rotation is the same with or without switch. ⅜" bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types **PQ** and **RQ** are supplied in standard tapers.

SINGLE CONTROLS



TYPE PQ

TYPE PQ. Full round ¼" shaft, approximately 3" from mounting face, with ⅜" long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix **PQ.**

TYPE RQ. Very short screw-driver slot shaft, ¼" diameter and approximately ½" long from mounting face with ⅜" long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix **RQ.**

TYPE RQ

TYPE RQL

TYPE RQL. IRC's new line of 10% tolerance Locking Type Bushing Controls. Screw-driver slot shaft ¼" diameter and approximately ½" long from mounting face, with a ⅜" split type bushing, and locking nut.

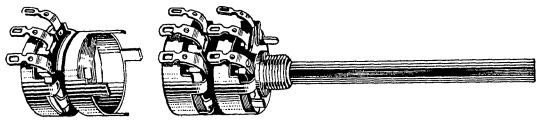
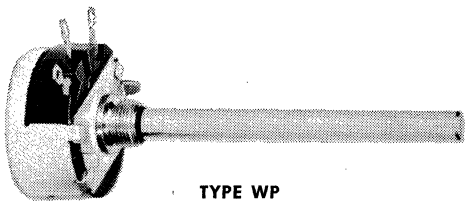
MULTISECTIONS

IRC MULTISECTIONS are complete control sections that can be added like a switch to any **Q**, **PQ**, **RQ** or **RQL** Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls. Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 25 values, as shown in following table. Each MULTISECTION adds $\frac{1}{32}$" to basic control.



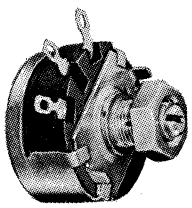
DUALS AND TRIPLES

IRC Type PQ, RQ and RQL Industrial Controls are supplied as single controls. Duel Control and Triple Control combinations are available by adding IRC MULTISECTIONS.



TYPE WP

Constructed with ⅜-32 x ⅜" bushing and ¼" diameter, full round shaft 3" long from mounting face.



TYPE WPRL

A new line of IRC distributor industrial controls with short screw-driver slot shaft ¼" diameter and approximately ½" long from mounting face, with ⅜" locking type bushing and locking nut. 10% resistance tolerance. Linear taper.

* Maximum current is given for a single control operating at an ambient temperature of 40°C and mounted on a metal chassis. Multiple controls must be so derated that hot spot temperature (ambient plus temperature rise) will not exceed 110°C on any winding.

IRC® RESISTEG COATED ADJUSTABLE POWER WIRE WOUND RESISTORS

The adjustable feature of these IRC resistors provides an ideal solution to odd resistance values and to handling a variety of line voltages. For voltage divider applications, one or more adjustable bands may be used.

IRC adjustable power resistors are standard Resisteg coated tubular units with a track of exposed wire to allow for adjustment. Adjustable resistor wattage ratings apply only when all the resistance is in the circuit. Resistor should not be adjusted with voltage applied.

TYPE 2DA 25 watts. Core size: 2" long x 9/16" dia. Terminals: 12A. One adjustable band: type X-2. Resistance tolerance: ±10%. Mounting hardware included: Z-1 brackets. Standard package: 1.

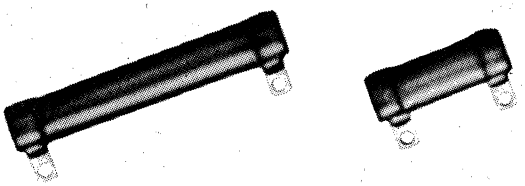
RESISTEG COATED FIXED POWER WIRE WOUND RESISTORS



MILITARY STYLE POWER RESISTORS

IRC's exclusive Resisteg Coating accounts directly for the superior stability of IRC power resistors. This coating is cured at temperatures below 205°F.—1000° less than required for other type coats. With low temperature curing, winding turns do not shift together. The wire is not "work-hardened" since excessive tension is not needed to prevent shifting. There are no failures from arc-over. And, RESISTEG COATED POWER RESISTORS NEED NO DERATING—even at high resistance values they operate at FULL RATED POWER! Low-temperature cured. Resisteg is an exclusive IRC feature.

RW29V 11 watts, military stamping, no hardware. Standard package: 1.

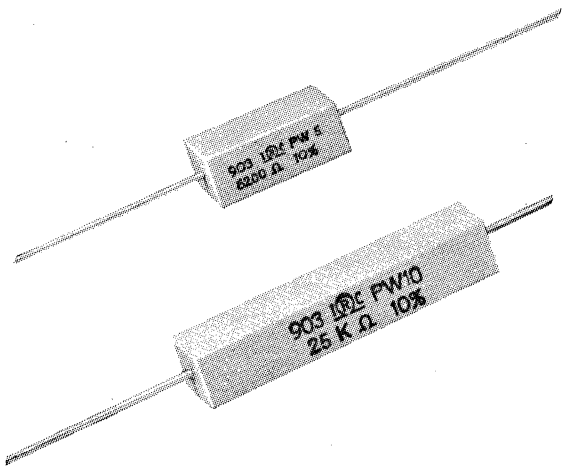
AXIAL LEAD POWER WIRE WOUND RESISTORS



These popular axial lead power resistors are the industry favorites for 5 and 10 watt applications. The compact shape fits among other components more easily. The axial lead design speeds installation. And, the superior solderability of the terminals assures sound connections every time.

A precisely wound element is sealed in a ceramic case—fully protected and insulated. Conservative rating permits continuous operation at full power. Resistance, wattage and tolerance are permanently marked on resistor body. Standard tolerance is 10%.

Popular Assortment of 20 PW10 resistors is available for handy bench stock. The values are selected on the basis of 10 watt usage. Resistors are mounted on plastic covered card with hole for hanging. Assortment 20A.

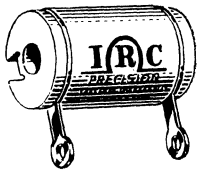
IRC PRECISION WIRE WOUND RESISTORS



IRC Precision Wire Wound Resistors are designed and manufactured to exacting standards necessary to insure consistent accuracy in critical applications.

The ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Insulation provides greater humidity protection and also contributes to longer trouble-free service.

Maximum temperature coefficient of .0027% per degree C is standard on all IRC Precision Wire Wound Resistors at no added cost.

IRC Precision Wire Wound Resistors have either radial lug or radial lead terminal, designed to eliminate any strain on the winding. These terminals offer excellent solderability.

CLOSE TOLERANCE PRESISTORS

UNMOLDED DEPOSITED CARBON

TYPE DC 1% ACCURACY. ½, & 2 WATTS STYLE RN20X, RN25X, RN30X (MIL-R-10509B)

IRC Deposited Carbon Precision Resistors offer a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores to produce a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits.

Deposited Carbon Presistors provide a combination of characteristics not found in any other resistor type. The wide range of values, accuracy, high stability, low voltage coefficient, excellent frequency characteristics, predictable temperature characteristics, high voltage rating, low noise level and small size of PRESISTORS make them superior to many popular applications.

IRC Type DC Deposited Carbon Presistors are available in three sizes: ½ watt (body size 9/16" x 5/32") M-Coat 1 watt (body size 15/16" x 9/32"), and 2 watts (body size 2 1/16" x 9/32"). Accuracy ±1% (25°C).

MOLDED DEPOSITED CARBON

TYPE MDC 1% ACCURACY. ½ WATT STYLE RN70B (MIL-R-10509C)

IRC's Molded Deposited Carbon Presistor is a precision film type resistor that incorporates the added advantages of a fully insulated unit. The molded insulation provides improved load life characteristics, better insulation resistance and greater resistance to moisture effects. The Molded Deposited Carbon Presistor provides all the advantages of the ceramic solder sealed types without the hazards of seal leakage, breakage and low dielectric strength.

Type MDC Molded Deposited Carbon Presistors are particularly suited for applications where an unmolded deposited carbon unit cannot be used due to the risk of mechanical damage to its coating, insulation breakdown and excessive moisture conditions.

Wattage Rating: ½ watt at 70°C. ambient (per MIL-R-10509B) derated to 0 at 165°C. Dimensions: 23/32" x ¼" (body size).

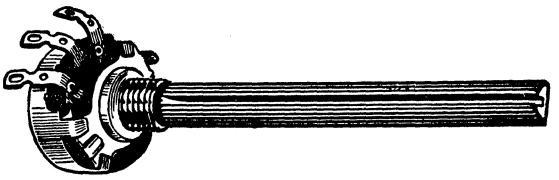
RADIO-TV TECHNICIANS' TYPE Q VOLUME CONTROLS



IRC's Type Q Control is the basic control for servicing all sets. It is carefully engineered to meet most replacement requirements with a minimum stock. The quality appearance and "cushioned turn" of the Q Control assure customer satisfaction. Easier installation and dependable performance provide more profitable servicing.

KNOB MASTER STANDARD FIXED SHAFT

Standard shaft is knurled, flatted and slotted and fits most knobs without alteration. For knurled or spring type push-on knobs, cut to length. For over-size, worn or web type knobs, split shaft slot lengthwise and spread ends. For positioned knobs, bend down control locating pins and rotate control base for correct knob position.

¼" LONG BUSHING

Shorter bushing and compact 15/16" design suit Q Controls to all small sets, yet handle large set needs as well.

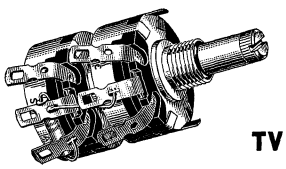
SPECIAL PURPOSE CONTROLS

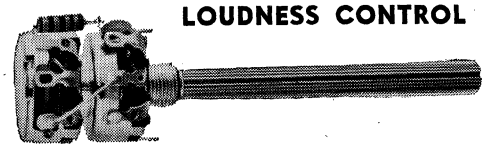


Type QJ-3 TV ATTENUATOR

- Reduces overloading effects on TV sets in strong signal areas.
- Diminishes interstation interference caused by nearby or powerful stations.
- Minimizes buzz due to high signal level in intercarrier systems.
- Permits easy adjustment of signal RIGHT AT SET.
- Frequently prevents mismatch of antenna load to set.

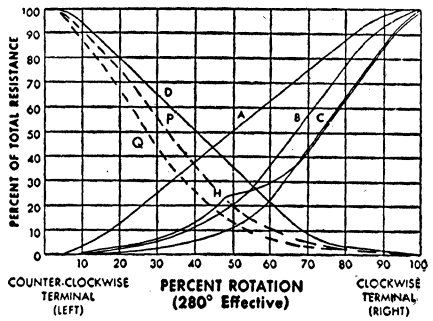
IRC's QJ-3 TV Attenuator permits ready adjustment of signal input to TV sets. In most cases, it corrects or substantially reduces such conditions as:—Adjacent channel interference, background picture on weaker stations, poor definition, picture and sound breakover. Also useful in service work—duplicating fringe area signals when shop is near strong local station.

Type LC-2 LOUDNESS CONTROL



A continuously compensated control that boosts lows and highs as volume is decreased—maintains depth and brilliance even at whisper level. Type LC-2 replaces makeshift compensating units—tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Automatically maintains proper balance of all frequencies in the audio spectrum at any listening level. Simplicity itself—as easy to wire into an audio circuit as any standard three-terminal volume control. Complete instructions included, showing applications. Type 76-1, 76-2 or 76-4 switch can be added to this control.

STANDARD TAPERS FOR Q CONTROLS



A—For potentiometer or rheostat where uniform resistance change is required.

B—Semi-logarithmic curve for tone control or audio circuit control.

C—Logarithmic curve for audio circuit control or antenna shunt control.

D—Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is important in controlling volume.

H—Tapped logarithmic curve for audio level control for automatic bass compensation.

P—Semi-logarithmic curve—reverse taper for use in contrast and picture control circuits in television.

Q—Semi-logarithmic curve—reverse taper for use in contrast and picture control circuits in television.

S—Special taper—based on specific specifications.

TV HEIGHT CONTROLS

Type HLC. Provided for reliable operation in TV—and other B + applications such as AGC, noise gate, focus, fringe lock and sync. Type HLC is a premium quality television height control with a 1 watt rating and small 1 5/16" diameter size. Slotted and knurled shaft is nylon, and can be easily shortened, if required. Control has tab mount design with rear adjustment. Supplied in six high range types with ±30% tolerance.

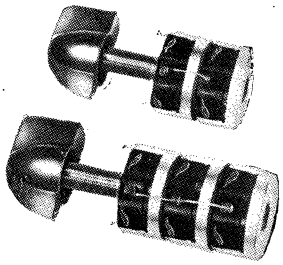
R Taper—Right Hand Taper with approximately 50% rotation when measured from Right Terminal to Center Terminal facing shaft end of control with terminals down.

U Taper—Standard Linear Taper.

L Taper—Left Hand Taper with approximately 15% of total resistance at 50% rotation when measured from Left Terminal to Center Terminal facing shaft end of control with terminals down.



L AND T PAD CONSTANT IMPEDANCE CONTROLS

For use in sound systems and for speaker control. Handle up to 10 watts of audio power (3 watts D.C.) L Pad provides constant input impedance; T Pad provides constant input and output impedances.

IRC L and T Pads provide unusual convenience features small size: Diameter—1¼"; depth behind panel—1$^{9}/_{32}$" (L Pad) and 1$^{27}/_{32}$" (T Pad). ⅞" bushing mounts Pad on panels up to ¾" thick. Interchangeable bushing available for metal panels. Shaft length is correct for knob supplied—no shaft cutting necessary.

Each IRC Pad is individually boxed and includes knob and dial plate.

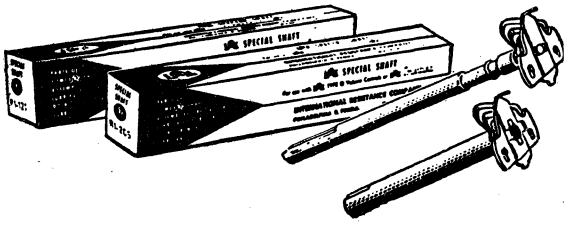
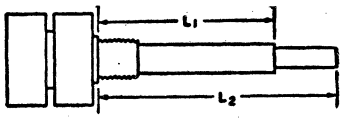
CONCENTRIKIT EXACT DUPLICATE SHAFTS

DEPENDABLE MECHANICAL FIT FOR YOUR TV REPLACEMENTS



Save time—be assured of accurate fit! IRC now provides a complete line of Exact Duplicate Shafts for CONCENTRIKIT—factory-tailored for dependable mechanical fit. No filing, slotting, soldering or cutting required! Many shafts are flatted as well as slotted to provide wider replacement coverage. Each shaft is a complete assembly, including contactor. Factory-lubricated, packaged in cellophase and in individual carton.



Exact Duplicate Shaft Stock Numbers indicate shaft length measured from mounting face when installed in control (L_1 is Outer Shaft length; L_2 is Inner Shaft length). First digit is number of whole inches in shaft length; remaining two digits indicate number of additional 32nds of an inch. Thus, P1-210 has shaft lengths of 2-10/32″ or 2-5/16″. Exception is Inner Shafts when used with K-3 CONCENTRIKIT where 3/32″ should be subtracted to determine shaft length.

LECTROHM

INCORPORATED • CHICAGO, ILLINOIS

LECTROHM IS CREATING NEW DESIGNS AND MATERIALS IN WIRE WOUND RESISTORS FOR NEW ASSEMBLY METHODS

In addition to supplying the electronics industry with superior vitreous enameled wire-wound power resistors in the familiar sizes and ratings, LECTROHM is producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

RITEOHM® PRECISION RESISTORS — ±1% TOLERANCE

"Riteohm" precision resistors are offered from stock in a variety of types. This distinguished line of precision resistors, finds universal application in laboratory and test equipment, in vital military and commercial equipment, in every application demanding high precision and assured stability.

SERIES 85, 86 ENCAPSULATED: Completely enveloped in a special, Ohmite-compounded resin, the encapsulated resistor offers the ultimate in stability, protection against humidity and damage. The specially enameled alloy resistance wire is pie-wound on highest quality steatite or epoxy bobbins. Series 85 features axial lead terminals. Series 86 has lug terminals. Temperaure coefficient of resistance is 0±30ppm/°C.

Voltages listed for Series 85 and 86 resistors produce the rated watts up to the established limit of 150 volts per pie. For non-standard values, closer tolerances or special construction, consult factory.

SERIES 77 METAL FILM: Consists of a thin film of special metal alloy permanently bonded to glass. This element is hermetically sealed in a high temperature tubular plastic case with a special resin. Series 77 resistors feature extremely low reactance at high frequencies, and noise level comparable to wirewounds. Useful in high frequency or pulse circuits where wirewounds are unsuitable and in high gain circuits where the noise level of composition types is excessive. Two temperature coefficients of resistance available: 0±25-ppm/°C and 0±50ppm/°C. Resistance values shown are selected from MIL Standard MS-90169, MIL-R-10509 and Bell Tel. Labs.

VITREOUS ENAMELED RHEOSTATS

Eleven sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers a range from 12½ to 1000 watts, in ratings that meet the major portion of design, production and emergency needs. Ratings of 12½, 25, 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel.

The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air;* when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

MOLDED COMPOSITION POTENTIOMETERS, ½ and 2 WATTS

Used in commercial and military electronic applications where high quality and dependable performance are important. Type AB, 1 5/32" dia., is rated 2 watts at 70°C ambient and is available with ⅞" slotted shaft (CMU), 2" unslotted shaft (CU, CA, CB, CCU dual unit) and locking type slotted shaft (CLU). Type AS, a miniature unit ½" dia. rated ½ watt, is available only with locking type shaft.

Because of their molded composition elements, these units outlast and outperform film type units. Noise level is exceedingly low. Single control Type AB units extend ⅝" behind panel; dual control 1 17/64". Type AS miniature unit extends 1 1/16" behind panel. An SPST switch for single Type AB units is available. Units are dust and splash proof, fungus and corrosion resistant and meet the latest requirements of MIL-R-94. Styles CMU, CLU and Type AS conform respectively to MIL-R-94 Styles RV4N, RV4L, RV6L.

The resistance wire and terminal lead are both welded to the end cap, utilizing the patented Ohmite welding technique. All have 1½" tinned wire leads, are simple to mount, and occupy small space.

Axial-lead resistors are especially suited for printed circuits, terminal board, and point-to-point wiring applications.

The standard resistance tolerance is ±5%, 50 ohms and higher; tolerance below 50 ohms is ±10%.

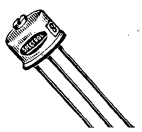
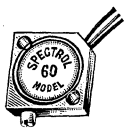
TRIMMERS



⅓" diameter transistor size Model 80



½" square Model 60

⅜" square Model 50

Spectrol trimmers are produced to the same exacting standards of quality and reliability engineered into the entire Spectrol line. The standard Models 50 and 60 are equipped with Teflon insulated stranded leads and are humidity proof. Printed circuit pins on the side or on the bottom of the case and bushing panel mount are also available. They are 25-turn models having ±5.0% resistance tolerance. Model 50 is available in ranges from 50Ω to 50K and weighs only 1 gram. Model 60 is available in ranges from 50Ω to 100K and weighs 2 grams.

Unit quantity prices, Model 50—$7.50; Model 60—$6.50.

The unique Model 80 is truly an advance in the state of the art in trimmer design. Built into a standard TO-9 transistor size case with standard MIL grid spacing for leads, the single turn Model 80 is available in ranges from 50Ω to 20K with a tolerance of ±5%.

Designed specifically for transistor circuits, the top adjustment and sealed construction allows complete package encapsulation. Unit quantity prices $6.00 each.

MULTIDIAL* Precision 10 Turn Indicating Dials

Mounting directly on your pot shaft with no panel drilling, the MULTIDIAL indicates each shaft turn in precise divisions of 1/100, and totals each completed turn with a snap—just one number visible for instant reading. The convenient locking mechanism grips and releases at a finger touch without disturbing your setting. Available in 2 sizes, 1" diameter and 1-13/16" diameter.

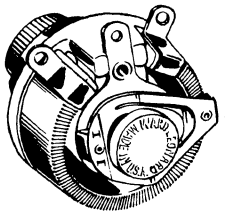
Vitrohm® RING RHEOSTATS

WARD LEONARD

25-Watt — 50-Watt



The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Ring Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on ¼" panel.

THE SEMICONDUCTORS

■ Amperex Post Alloy Diffused VHF communication Transistors for RF, IF, converter, mixer and oscillator applications—PADT-produced to provide UHF performance at VHF prices, with maximum uniformity, interchangeability, high beta and greater design freedom for the engineer.
■ Amperex PADT Transistors for high speed switching applications, featuring high dissipation, uniformity, and deep-diffused, extremely thin active base region, resulting in increased beta and higher cut-off frequency.
■ Amperex PNP and NPN Transistors for audio and computer applications, featuring high power handling capacity, low leakage and unparalleled ruggedness.
■ Amperex Germanium and Silicon Diodes, including a complete subminiature line, as well as silicon reference and power rectifier types, designed for the manufacturer who demands optimum stability.

THE P·A·D·T PROCESS

The Post Alloy Diffusion Technique—P·A·D·T—is the world's **only** process that combines the best qualities of both the alloy and the diffusion approaches to transistor manufacturing. This unique process, implemented and fully proven by Amperex, provides the quality manufacturer with immediately available production transistors of laboratory calibre... and at the lowest possible cost.

THE PLANT

Amperex, Slatersville, Rhode Island—one of the world's most modern plants devoted exclusively to the manufacture of semiconductors for industrial, communications and entertainment applications. The exclusive "self-jigging" techniques employed by Amperex, as well as specially developed tooling methods and fully automatic high-volume equipment, are the user's guarantee of complete satisfaction.

APPLICATIONS ASSISTANCE FOR CUSTOM AND STANDARD TYPES

The facilities of the modern Amperex applications laboratory and the Amperex R & D laboratory—both located at the Hicksville, Long Island, plant—are always available to Amperex customers for consultation on any applications problem.

CONANT

CONANT MINIATURE METALLIC RECTIFIERS

All Conant rectifiers are manufactured to the highest quality standards from individually tested and graded cells. Copper oxide cells are produced by the exclusive Conant Process and have 24K gold contacts applied in high vacuum.

The Conant Complete Color Code permits identification of rectifier type by color and physical form.

Only basic standard rectifier types are listed below. Many other standard catalog items are available and we are prepared to produce special items to meet customers' special requirements.

PHOTOCELLS, SUN BATTERIES AND PHOTO-CONDUCTIVE CELLS

EXPERIMENTER'S TYPES

Specially selected, low priced, efficient units for the experimenter and hobbyist. Many applications in transistorized radios, light meters, powering small motors, etc. Rugged selenium types have spectral response similar to the human eye; often used in light meters. Silicon cells have higher light conversion efficiency. Types "S" are the same as used for battery charging in space vehicles. All units supplied with pigtail leads. Outputs, shown, is in full sunlight, using conventional volt and ma meters.

Activates relays for use in door-openers, burglar alarms, traffic and industrial counters, turning lights on in evening for store windows, signs, parking lots, etc. These cells are "light sensitive resistors" with resistance varying from a few hundred Ohms or less to bright light, to Megohms in darkness. A 24 page Experimenter's Handbook supplied free with each cell. Max. voltage 120 AC or DC, 0.2 Watt Max. Power dissipation.

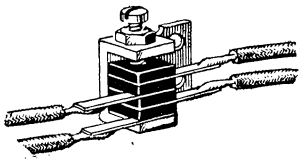
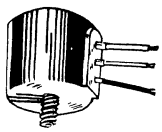
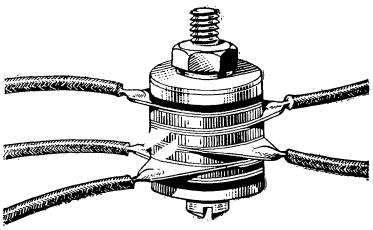
SCHAUER INSTRUMENT RECTIFIERS



TYPE A4A



TYPE BP2B



TYPE C4A

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation.

Size "B" Rectifiers are encapsulated —fully sealed in special formula polyester plastic in attractive red color. Cells are specially processed with vacuum evaporated gold contact areas to give maximum efficiency, stable operation and low aging characteristics. All rectifiers are supplied with 3″ leads, color-coded. (Red, positive; black, negative; yellow, A.C.) Plastic encapsulated ectifiers have lead insulation imbedded in the plastic for better sealing, eliminating short circuits at the rectifier. Lead lengths of other than 3″ can be supplied on special order.

"A" SIZE CELLS have good frequency response above the audio range and can be used at higher frequencies. Recommended for meter applications needing 1MA or less for operation. Can be used for other applications requiring up to 5 MA.

"B" SIZE CELLS are for meter, relay and other applications requiring 1MA up to their maximum rating. Recommended for commercial and low audio frequency operation.

"C" SIZE CELLS—are for general applications requiring larger output currents and operation of meters, relays and other apparatus. Special process cells for varistor applications.

Write, wire or telephone for complete information. We welcome your inquiries concerning any special rectification problem.

BUSS Fuses

FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

for Protection of TV, Radios, Instruments and Electronic Equipment

TRON PIGTAIL FUSES

Sub-miniature — hermetically sealed

Tron fuses are so small they can easily be used as an integral part of circuit — to protect miniaturized devices — or gigantic multi-circuit electronic devices — without sacrifice of space.

Fuse element hermetically sealed

Tron fuses may be potted or encapsulated without danger of sealing material affecting operation. Not affected by atmospheric or surrounding conditions. Designed for installation in high shock and vibration ambients.

They are self-protecting and operate without exterior flash or venting, so they can be installed anywhere in the circuit. Likewise, they may be teamed in one capsule or replaceable unit with such components as resistors or condensers.

Available in ratings from 1/20 to 5 amperes — for use on circuits of 125 volts or less where available fault current is not over 50 amperes.

Color coding indicates ampere rating and assists in final inspection of fused circuits.

Made with 1½ inch axial pigtails that are adapted to feed through automatic wire forming machines — or with 1 inch right angle pigtails conveniently spaced for assembly on printed circuit chassis. Leads are of No. 24 tinned copper wire.

Test specifications —

Characteristic A — Carry 100% load, open within 10 seconds at 200% load.

Characteristic B — Carry 100% load, open within 10 seconds at 150% load.

GMT

HLT

For multiple circuit apparatus where space is at a premium

GMT fuses and HLT fuseholders permit multiple mounting of fuses in limited space, for protection of communication equipment, business machines, computers, control circuits or any equipment operating at 300 volts or less.

Holders take panel mounting space of only ¼ inch horizontal by $1\frac{15}{32}$ inches vertical.

Fuses give visual indication when blown by release of a spring indicator. The spring carries a colored plastic flag, in a different color for each fuse ampere rating.

The indicator spring when released makes contact with an alarm terminal in the fuseholder, which can be connected to activate a signal circuit.

Blown fuses are readily replaced without use of insulated tools. When mounted on minimum centers, removal of fuse is easy by use of a wire hook.

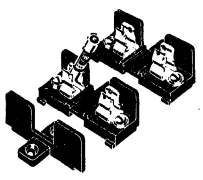
BUSS Add-On Fuse Blocks for $^{13}/_{32}$ x 1½ inch Fuses



Single-pole fuse blocks and separate end barrier assemble into a unit block of one or more poles. Units lock in position. Assembled block becomes a single unit.

Each fuse can be used as a disconnect. See illustration. Raised fuse identifies open circuit and prevents confusion in getting right fuse back in circuit.

Marking strips so each circuit can be identified available.

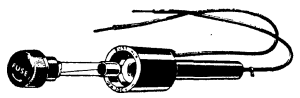
BUSS Fuses
FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

for Protection of TV, Radios, Instruments and Electronic Equipment

BUSS In-the-Line or Panel Mounted FUSE & HOLDER COMBINATIONS

Non-Indicating
For voltages up to 300



In these two fuse and holder combinations the fuse and knob of fuseholder are in one piece. When fuse blows, the entire fuse-knob assembly is replaced.

This gives added safety to the circuit because neither the HLR or the HLQ holder will take an ordinary type fuse. Thus a blown fuse must be replaced with the type of fuse originally installed.

Fuseholders can be mounted in-the-line — or panel mounted.

For panel mounting a snap-in steel clip is available that makes it easy to mount fuseholders.

Test specifications for GLR, GLQ, GMF, GMQ fuses

Carry 110%; open at 135% within one hour.
Listed by Underwriters' Laboratories, Inc.

Shipping wt. per 100: GLR and GLQ 1.5 lbs., GMF and GMQ 1.4 lbs.

HLR and HLQ Fuseholders

Recognized under the components program of Underwriters' Laboratories, Inc.

Shipping wt. HLR and HLQ holders 3.13 lbs. per 100.

Lead-in-Wires — Unless otherwise specified, HLR and HLQ holders are furnished with 6 inch leads of No. 18 solid copper wire with high temperature insulation. The bottom wire carries a clip to prevent it from sliding into holder. Leads of other types of wire can be furnished to your specification at slight additional cost.

Mounting Clip No. 6374 — BUSS Snap-in Steel Clip is available for mounting HLR and HLQ holders on any panel 1/32 to 1/16 inch thick. To mount holder, insert clip into mounting hole BEFORE INSERTING HOLDER. Then push holder into position in panel.

Packing — Fuses and holders are normally packed separately. Carton quantity: Fuses 5, Holders 10.

For production use, holders and fuses can be obtained packed separately, 100 to a carton.

Fuses assembled in holders also are available for a small additional charge.

HLR HOLDER SAFEGUARDS AGAINST USE OF WRONG TYPE OF FUSE

HLR fuseholders make it simple to protect a wide variety of devices or equipment from damaging fault currents because it is designed to take only GLR or GMF fuses.

HLQ HOLDER PREVENTS TOO LARGE A FUSE BEING USED

GLQ BUSS fuses or GMQ FUSETRON fuses used in HLQ fuseholders give a size limiting combination.

Each type of fuse is available in 13 ampere sizes, for voltages of 300 or less.

Over-fuseing is prevented because ears on fuses match slots in holder. This prevents use of a fuse of larger ampere size than marked in holder.

This stops anyone from heedlessly replacing a blown fuse with one of a size too large to protect the circuit or equipment.

Pushbutton Switches

Snap-Action, Momentary Contact

The exclusive Hetherington snap-action mechanism reduces arcing and contact wear... provides far greater current capacity than the small sizes of these switches would indicate. Mechanism enclosed in dust and moisture-resistant anodized aluminum housings (phenolic in B2001 & B2002). 1-piece terminals and contacts firmly anchored to bases. Many types meet JAN and MIL Specs for aviation and military requirements.

Features and dimensions are subject to change based on engineering refinements. If dimensions or specifications are critical, obtain drawings from Control Switch engineering department.

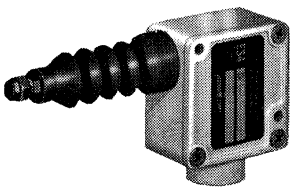
LIMIT SWITCHES ES4 type



Especially designed for machine control, automation circuitry and sequencing operation. Aluminum diecast housing protects switch from damage, dirt and corrosion, simplifies mounting on equipment. Some models available with neoprene boot on plunger for protection from dirt, oil and metal chips. Impulse models eliminate need for one-way dogs, complicated relays and timers. As plunger is depressed, switch completes electrical circuit during pre-set section of travel ("ON" period), but does not make circuit on return stroke. Case size: 2" (plus plunger length) x 1 31/32" x 2 3/16". Rating: 10 amps, 125/250 VAC. Circuit: SPNO.

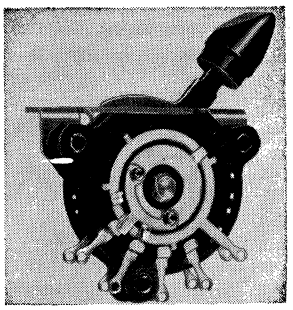
LEVER ACTION SWITCHES AND UNIQUE MOLDED SWITCHES

3-, 4-, 5-, and 6-Position Lever Switches — Time-saving Ring-Contact Rotaries — 6-Pole DT per Deck



SS-14-1L4F-2
Two-Deck Lever-Action Switch

SINGLE DECK, POSITIVE INDEXING, 3- and 4-POSITION. These lever switches are derived from the J-B-T SS-14 instrument-type rotaries. Specified for tube checkers, inspection equipment, communications systems, control consoles, and other uses where quality is important. 4-position types are interchangeable with 3-position except in length of throw, and provide for an extra circuit. Individually-boxed switches come with mounting hardware and KN-17 knob as illustrated; bulk shipments, without knobs. Spacing between centers: recommended ¾"; minimum 9/16". For dimensions, see drawing below.

Spring Return Type. Single deck, 3-position switches may also be ordered with spring return. Lever returns to position 11, giving momentary action at positions 9 and 10.

Two Deck. Same basic construction and packaging as single deck. Spacing between centers: recommended, 15/16"; minimum, 13/16". ⅜" between decks matches TV twinlead wires.

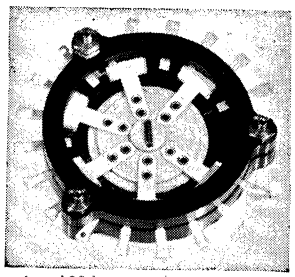
6-POLE DOUBLE-THROW PER DECK — 1 OR 2 DECKS



6-Pole Switches. Double-throw switching of 6 circuits per deck through two 18° positions (36° throw) becomes easy with this unique rotary-type molded switch. It is fully enclosed and similar in appearance to the molded MS-20 switches on page 1229 The illustration at the right shows internal construction with back protective cover cut away. Circuit arrangement is designated on the metal front of the switch. Quality features include .007 ohm average contact resistance; heavy, fine-silver plating for 100-hour salt spray test; double-grip collector arms. NEW IDEA: RING-CONTACT SWITCHES

Perfect connections between adjacent switch contacts are assured because this distinctive design needs no soldered jumpers. An integral ring which holds together all the contacts on each deck can be snipped wherever wanted—to save valuable time in development and pilot runs. For production lots, J-B-T can supply various combinations of joined and unjoined contacts to slash the user's assembly costs and build in quality. The ring-contact adds 7/32" o.d. to the MS-14 or MS-20 types listed on page 1233 (prints SK-88 and SK-89 respectively). The MS-20BR-1 shown here also has bonded (suffix B) construction. Switches listed below are normally available. Others such as 3-decks, 6-decks, shorting, etc., require substantial lead time.

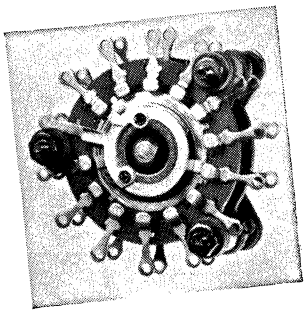
INSTRUMENT AND TESTER SWITCHES (Laminated)

Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting



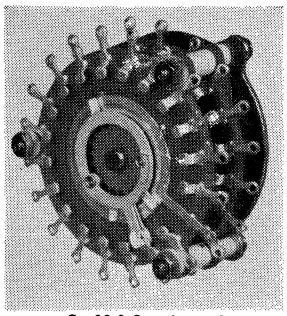
SS-14-2 Laminated

J-B-T Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available as a 14-position or a 20-position in laminated or molded types—the design gives extra contacts in minimum space. One to six decks.

FEATURES:

Reliability — Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf type (SS-20), and sharp detent assure positive indexing. Springs of both types are replaceable without disturbing soldered connections. Laminated plastic decks and rotors are selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms.

Exceptional Compactness—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Each deck above first adds only 5/16".



SS-20-2 Laminated

Low Contact Loss—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric—AC or DC; carries 1 amp., 125 volts VAC, inductive load; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts 1500 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

Military Variations—The following can be supplied on special order at extra cost: (a) laminated plastic, Type PBE-P per Spec. MIL-P-3115B; (b) vacuum impregnation of rotors, decks, spacers, and ceramic spacers with approved fungicides; (c) hot tin dip on contact surfaces to be soldered; (d) 14 or 20 live positions, no off, (add suffix F, as SS-14-2F or SS-20-1F); (e) common position in non-standard location.

BASIC 14-POSITION: 1¼" Bar knob (KN-14) supplied only on individually packed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, unless otherwise specified. **Contact lugs** and common lugs positioned as shown below, 13 contacts per deck. **One to six decks;** for each additional deck (or gang) add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Fixed Stops** can be supplied on quantity orders at moderate cost. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

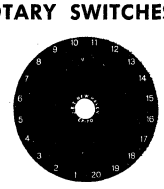
BASIC 20-POSITION: 2" Bar Knob (KN-16) supplied on individually packed units—not on bulk orders unless specified. **Collector Arm** placed directly opposite to flat of shaft unless otherwise ordered. **Contact Lugs** and common lugs positioned as shown below, 19 live positions per deck, standard. **One to six decks;** for each additional deck or gang add 5/16" to depth. **Continuous rotation** type supplied unless otherwise specified. **Panel locator** positioned as shown; can be modified on bulk orders.

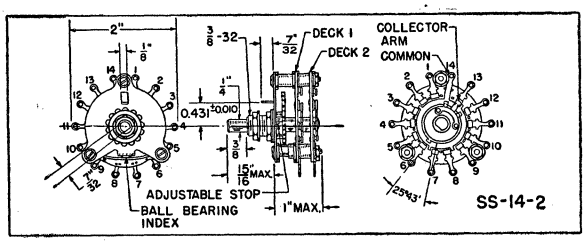
COMBINATIONS IN SS-14 and SS-20 SERIES: In addition to the military variations listed above, shorting and non-shorting decks can be assembled on the same switch shaft. Reference to the sketch below will be helpful in numbering decks and contacts when ordering non-standard assemblies. Specialized requirements for stainless steel shafts, no flats or double-flats on shaft, longer projections beyond bushing, and other variations can also be supplied, with necessarily longer delivery time and additional cost.

ETCHED DIAL PLATES FOR ROTARY SWITCHES

For SS-14 or MS-14 Series; and for SS-20 or MS-20 Series. Dull black finish—with raised bright metal numerals. 2¾" diameter.

EP-13 off thru 13 ..... **$0.23**
EP-14 1 thru 14 ..... **.23**
EP-19 off thru 19 ..... **.23**
EP-20 1 thru 20 ..... **.23**





Note: Threaded bushing on all SS-14 changing to 3/8-32 NEF-2A.

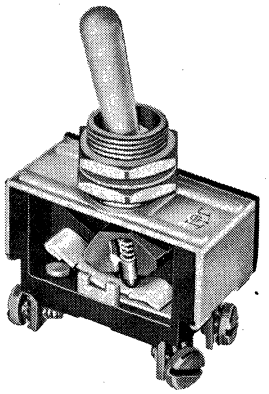
TOGGLE SWITCHES — HEAVY DUTY — SINGLE & DOUBLE POLE



*Cut-away view showing J-B-T's use of solid coin silver rocker arms and contacts.

Overload . . . Tested to make and break at 50% overload for brief periods. To assure performance of these switches with their comparatively heavy current ratings, J-B-T features ample size ***solid coin silver contacts and rocker arms** instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 1000 volts r.m.s. at 60 cycles at sea level.

Cold and Heat . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at —85°F to 185°F.

Vibration and Shock . . . No momentary make or break or mechanical damage during severe shake and 75 G's drop tests.

High Humidity . . . Materials, dull finish on outside metal parts (per Armed Services specifications) and lubricant enable switches to withstand tropical climates.

Salt . . . Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the requirement of MIL-S-3950A.

Rugged Service . . . Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Quality standards are maintained by in-plant production testing.

20 AMP — HEAVY DUTY — These pages cover 130 models of heavy-duty toggle switches nominally rated at 20 amp. at 125 VAC, and 10 amp., 250 VAC, and other ratings where specified in MIL-S-3950A. **6 Amp. — Medium Duty** described at bottom of next page.

NOTE A: MS and AN types use internal sand and dust toggle seal and other high performance features involving extra cost over ST types. MS types to MIL-S-3950A have internal toggle seal to meet 15 ft. water submersion test.

NOTE B: Official Government policy recommends future procurement of toggle switches for military use be only to MIL-S-3950A. For heavy duty switches, MIL-S-3950A (with suffix —21 and higher) in the MS25068-, MS35058- and MS35059- series, calls for screw terminals only. Such terminals are prepared for soldering and may be soldered after removal of screw. For medium duty switches MIL-S-3950A, in the MS25098- and MS25100- series, calls for solder terminals only.

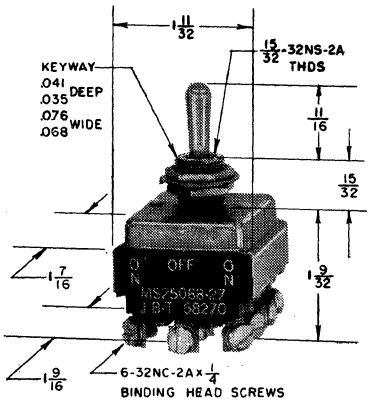
TOGGLE SWITCHES — HEAVY DUTY — 4 POLE

GOVERNMENT-QUALITY, SUPERIOR CONSTRUCTION, DESIGNED FOR MIL-S-3950A, SERIES MS25068



MS25068-27

Newest additions to the J-B-T family of toggle switches are 8 models of 4-pole construction. They make up the MS25068-series, designed for MIL-S-3950A, and use single-hole mounting with single-throw or double-throw action as designated in the table. All have Silicone rubber bushing seals. To surpass the rigorous electrical endurance requirements, J-B-T switch bodies in the MS25068-series are molded of a new compound having hi-arc resistance and low shrinkage characteristics. The material is readily identified by its light brown color and silver printing.

*Cut-away view of self-wiping construction showing outside of double-grip moving contact.

Like other J-B-T Switches, this series has quality as its first objective. J-B-T builds-in quality by doing its own design and manufacture, and by a continuous program of in-plant tests of production samples for quality assurance.

Typical Applications . . . This series is popular in communications circuits, electronic instruments, dry circuits (but with gold plated current carrying parts recommended for extremely low currents and voltages), measuring devices, miniature motor controls, and computers.

Self-Wiping Design . . . Even after long storage, a few flips of this switch brings the contact resistance well under the 0.01 ohm requirement of military specifications. As illustrated*, the double-grip moving contact of phosphor bronze heavily silver plated wipes over the stationary contacts of brass, also heavily silver plated.

Sound Electrical Values . . . Tested to meet 50% overload for brief periods. High dielectric exceeds 1000 volts r.m.s., 60 cycles at sea level.

Exceptional Environmental Characteristics . . . Functions well throughout a range of —85°F to 185°F, with materials, plating, lubricant, and mechanical features to withstand tropical climates. Dull finish plating as stipulated in specificatons meets 100 hour salt-spray test QQ-M-151a (twice the required minimum). Other plating quoted on request.

Rugged Construction . . . Solder type hot tin dipped terminals as used throughout this series withstand 5 lb. pull test . . . enclosed molded body has no unused holes for side terminals . . . no momentary make or break or mechanical damage during severe shake tests and 75 G's drop test.

Relays using Vacuum Switches

Type R and RH Vacuum Switches are available from Jennings mounted as relays for indoor use. They may be mounted with contacts normally open or normally closed or two switches may be mounted in a single pole double throw arrangement. Either ac or dc solenoids may be used. Insulation between the switch and its actuating solenoid is provided by a 2 to 12 inch puller rod providing 40 to 140 kv insulation. CE grade phenolic laminate is recommended for dc or 60 cycle use. Grade G7 silicone glass laminate is recommended for radio frequency applications.

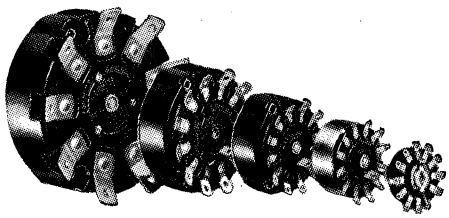
POWER TAP SWITCHES NON-SHORTING TYPE



Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

LIMITED CURRENT FUSES & HOLDERS

A new approach to circuit protection completely eliminating the possibility of overfusing circuits. This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps.

The Limited Current Fuse Holder is designed to accept only the size, amperage, range and type (regular or slo blo) in its amperage range. The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

STANDARD FUSE CLIPS

For the exacting performance often required in the electronics communications, radio, television, aircraft and marine equipment industries, we recommend our beryllium copper fuse clip. Beryllium copper clips have lower contact resistance and higher conductivity than ordinary fuse clips. They are silver plated, a finish well suited to fuse applications.

Individual gain adjustment for each channel. Transistor amplifier (powered by 9 volt battery included) overcomes usual loss of resistance type mixer and actually provides a 6 db. gain; permits use up to 30 feet from Recorder or Amp. Accepts input signals up to 1.5 volts. (Use a Switchcraft Molded Cable Assembly with proper connection to fit your equipment—not included.) Low noise level; low distortion. Response 20 to 20,000 cycles.

When used with a "Mini-Mix", will accept signals up to 2 volts. Has a "HI-LO" Impedance Switch; in "HI" position, when used as a straight amplifier (without mixer) has a 200,000 ohm input and provides a 6 db. gain and in "LO" position has a 25 db. gain with input impedance of 5,000 ohms. Compact, approximately size of package of cigarettes; completely portable, requires 9 volt battery (included). Has standard 2-cond. Phone Jack Input and 2-cond. Phone Plug Output. Can also be used at a microphone, using cables up to 30 feet long, without serious loss of high frequencies.

TEMPERATURE REGULATING STANDS

These automatic devices regulate and control the tip-temperature of an electric soldering iron while the iron is connected to current and at idle. The controlled soldering iron is maintained at all times at just the right heat to meet the requirements of the job or the needs of the user. Suffix "SG" after catalog number indicates stand is equipped with safety guard.

MULTICORE SOLDER

Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders. Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to thin rapidly produces perfect joints with less solder. Greater coverage per pound.

ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies. Free from objectionable odor. Nontoxic in use. Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

COPPER-LOADED SAVBIT ALLOY

Copper-loaded SAVBIT is one of a number of solder alloys developed for the industry by Multicore, it is entirely different—and, it is patented. SAVBIT alloy contains its own copper, and therefore will not take the copper of the soldering iron tip into the molten solution during soldering. This absorption of copper when any standard alloy is used is a basic reason for the wearing out of the expensive copper tips, and the need for constant refinishing of the tip.

Comparative tests with solders having pure tin/lead alloys and the new Ersin Multicore copper-loaded SAVBIT alloy have been made on assembly lines of electronic plants. Results of these tests have proven that startling production efficiencies and economies may be realized when the wear and corrosion of copper soldering iron tips is curbed, using SAVBIT alloy. Equally as important . . . a higher standard of soldering quality is assured for a much longer period of time.

SAVBIT alloy is available in Ersin Multicore 5-Core Solder containing non-corrosive extra fast Ersin flux in 14, 16, and 18 gauge. Its melting point is virtually the same as standard tin/lead alloys.

New! HAND-CRAFTED *Gold Lion* Custom Tubes

Produced by General Electric Co. Ltd. of England

A completely new series of plug-in replacement tubes, *hand-crafted* to give *higher power, lower distortion* and longer life.

In contrast to mass-produced tubes, which often vary widely in their characteristics, new Gold Lion tubes are made to extremely close tolerances, and individually 100% tested for major characteristics, including operation tests, noise and microphony. For the first time . . . an individual test report is packed with each tube, certifying measured production characteristics.

BOKER U.S.A. IN-DUS-TRONIC TOOLS QUALITY SINCE 1837 ®

DESIGN IN-DUS-TRONIC tools are more streamlined, with slender jaws and fine points, to reach into the tight spots and perform the specific work required of the electronics technician.

TEST AND INSPECTION Individually tested for hardness, each tool must maintain highest standards for handle strength and cutting ability. To assure perfect jaw alignment, pliers must cleanly cut single bond paper strips and snip cotton-covered lamp cord without fraying. Each tool is guaranteed against defects in workmanship and materials.

WORKMANSHIP IN-DUS-TRONIC tools are hot drop-forged from special analysis alloy steel, machined and finished with the same care and precision which have made world-famous BOKER TREE BRAND Fine Cutlery and surgical instruments for over a century. Individually fitted and adjusted, each is accurately heat-treated by HYDRIZING, which minimizes "carburization" and "decarb". Cutting blades are precision-hardened with electronic controls, and honed by hand for keen edges that retain their sharpness.

Each tool is guaranteed against defects in workmanship and materials.

WORKMANSHIP IN-DUS-TRONIC tools are hot drop-forged from special analysis alloy steel, machined and finished with the same care and precision which have made world-famous BOKER TREE BRAND Fine Cutlery and surgical instruments for over a century. Individually fitted and adjusted, each is accurately heat-treated by HYDRIZING, which minimizes "carburization" and "decarb". Cutting blades are precision-hardened with electronic controls, and honed by hand for keen edges that retain their sharpness.

PLASTIC HANDLES-(TN-22, TN-33, TN-44, TN-55) are of Tenite II, 4" x 3/8" hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x 3/8" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. 1/8" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

WIRE BRUSH—has approx. 200 bristles of stainless wire .0035 in dia. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

High efficiency and reserve-heat capacity make these General Electric soldering irons well-suited for continuous-production soldering as well as intermittent duty.

Quick, dependable heating provided by General Electric Calrod cartridge heating elements.

Ironclad tips for high-speed repetitive soldering last up to ten times as long as plain copper tips. Ironclad construction combines the fast heat transfer of copper and long wearing qualities of iron.

Calorized copper tips—For **ordinary** soldering requirements, these tips will last much longer than plain copper tips.

All copper parts are Calorized—Calorized surfaces retard the harmful effects of high temperature on copper.

Solders easily in tight places because the thin, 5/16-inch diameter shank gets the ¼-inch tip into places a regular iron can't reach.

Reduces operator fatigue—Iron weighs only 8½ ounces, is well balanced and has comfortable handle.

Produces uniformly strong soldered joints because iron's quick heat recovery produces enough heat for hard, continual use.

Saves on maintenance—Fewer interruptions in production result because iron's sturdy construction and long-life ironclad tip eliminates need for frequent repairs.

Tip renewal is easy and inexpensive—Unscrew shank from handle and replace with new, low-cost assembly in seconds. New tips can be brazed to heater assembly if desired.

TRANSFORMERS

Three transformer types are available for use with the General Electric Midget irons. The single-heat type provides 35 watts for ordinary requirements. The four-heat type permits a range of heats from 26, 28, 32 and 35 watts by changing the tap connections. Where lower heat is required for printed circuit board or where there are long periods of idling, the three-heat transformer with switch should be used. The LOW heat position provides temperature suitable for printed-circuit soldering. The MEDIUM and HIGH positions supply 28 and 35 watts respectively. The switch provides an easy means for changing heats. With this transformer the iron is completely isolated, thus preventing injury to low-voltage components such as transistors and diodes.

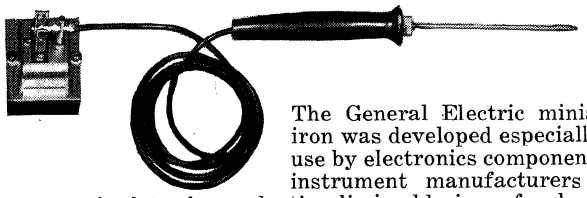
●Use of this transformer requires special cord set with plug. Order catalog number 9218864G8 for handle and cord set, **List Price Each, $4.15.** In addition, order tip and heater assembly desired.

MINIATURE SOLDERING IRONS



The General Electric miniature iron was developed especially for use by electronics component and instrument manufacturers who are required to do production-line soldering of subminiature equipment, printed circuits, and instruments. The Miniature, because it has a tubular heater built into the tip, provides fast, efficient heat to produce uniform joints, with little heat loss to adjacent areas. In addition, the Miniature's ⅛-in. tip and shank will go into congested areas to solder critical points inside the equipment with minimum damage to surrounding insulation, joints, and wiring.

Improves operator efficiency—Weighs less than 1½ oz, reduces operator fatigue, increases production.

Portable—Transformer integral part of cord set, plugs into any standard 115-v outlet.

PENCIL SOLDERING IRONS

In August 1961, General Electric introduced a completely new addition to its line. The line is rated 115 volts, 30 and 50 watts, and is comparable in size to the Midget. Included are tip and heater assemblies, and tip holder and heater assemblies with a wide range of interchangeable screw-in tips.
The rugged construction, long life, efficiency and mobility of the irons make them ideally suited to either continuous production line operation, intermittent operation, or maintenance work.

MOST MODERN TIP COATING PLANT
400,000 TIPS CARRIED IN STOCK

ADVANTAGES No filing or costly tip changes because there is no pitting or erosion. Original shape is maintained. Tips always perform "like new"—deliver the same heat consistently for more uniform joints. Overall cost is greatly reduced.

IRON COATED

HEXCLAD—LAST UP TO 10 TIMES LONGER THAN COPPER TIPS

A heavy durable coating of Iron Alloy over copper base on all exposed surfaces. Inserted part also has a protective coating which is sufficiently thin so that good heat transfer to the tip is maintained.

IRON COATED AND IMMUNIZED

XTRADUR—LAST UP TO 20 TIMES LONGER THAN COPPER TIPS

Mult-coated for extra long wear by a new exclusive process which immunizes shank of tip from solder, thus preventing adhering of solder, except on working surface at end of tip—prevents creeping of solder into tip hole and spilling of solder on components.

IRON COATED AND IMMUNIZED

DUROTHERM (PAT. PENDING) Non-Freezing Tips

For HI-TEMPERATURE Irons, Anti-corrosion design absolutely prevents tips from sticking. The most wear-resistant yet developed. No need to remove tips daily to prevent sticking. Minimum heat delivery loss. Have XTRADUR multi-coated, immunized features.

MAGIC-TIPS

One tool starts the screw and drives it. To operate one merely places the tip of the Magic-Tip in the slot of the screw and pushes gently . . . the screw becomes firmly fastened to the blade—easy to start even in places inaccessible to the fingers. No bulky claws to get in the way because the mechanism is internal and fully automatic. Hardened steel locking pin, tough chromoly steel tip, plus sturdy OVER ALL construction assures long trouble-free operation.

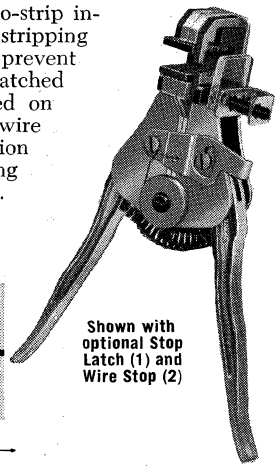
FOR PRECISION WIRE STRIPPING

Removes Teflon* and other hard-to-strip insulation. New "concentric hole" stripping blades and special design of jaws prevent damage to insulation and wires. Matched sets of blades are precision drilled on watchmaker's equipment to exact wire sizes. Chucking action on insulation guides conductor through stripping hole, preventing nicks and scrapes. 3 models, wire sizes from 10 to 30.

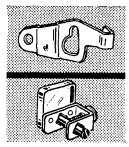


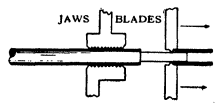
Shown with optional Stop Latch (1) and Wire Stop (2)

EXTRA FEATURES (optional)

"SHORT-STOP" LATCH protects wire by limiting stroke to 5/32" – disengages without removal for full 7/8" strip.

"SEE-THRU" WIRE STOP assures uniform lengths by adjusting to strip length desired.





Counterbored stripping hole "chucks" insulation

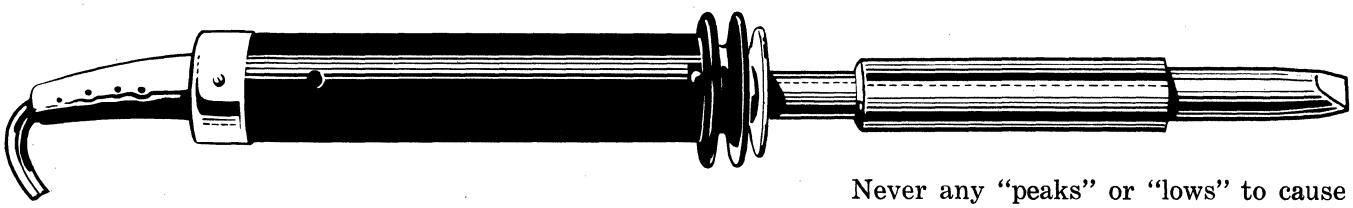
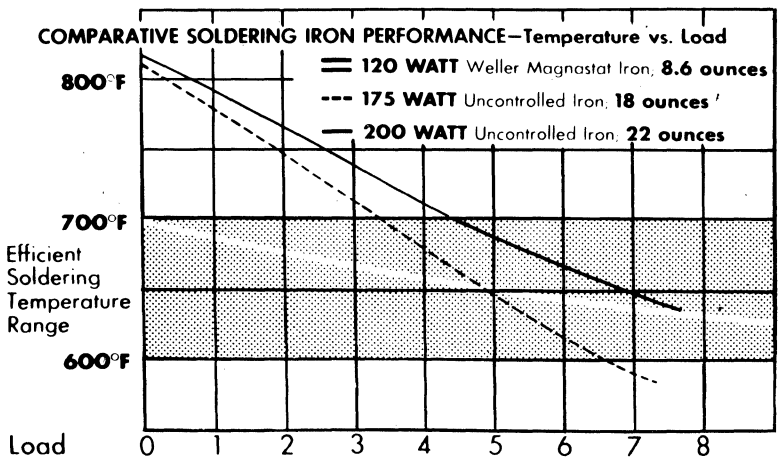
TEMPERATURE CONTROLLED SOLDERING IRONS

Weller®

. . . the only soldering irons with built-in MAGNASTAT temperature control in the tip



THIS CHART SHOWS HOW A WELLER TC1202 IRON DOES THE WORK OF UNCONTROLLED IRONS OF APPROXIMATELY 3 TIMES ITS WEIGHT



White line—Weller TC1202 Magnastat Soldering Iron stability as compared with two typical uncontrolled irons.

Never any "peaks" or "lows" to cause faulty soldering. Tip temperature automatically remains constant. Magnastat Irons also weigh only half as much as uncontrolled irons and give greater heat efficiency with lower wattage.

Plus these advanced features for greater adaptability, longer life:

- Various tip types available
- Tip retaining nut minimizes freezing
- Rubber shock absorber prevents sliding
- Rugged, non-arcing snap switch
- Handle remains cool

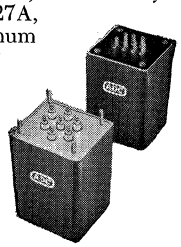
POWER TRANSFORMERS *FOR MILITARY AND INDUSTRIAL APPLICATIONS*

Reliability, minimum size and long life under rugged environmental conditions are prime requisites in today's military electronic equipment. To meet these modern standards, ADC offers a complete line of hermetically sealed power transformers. Designed to meet MIL-T-27A specifications and utilizing MIL cases and mounting dimensions, these units offer our customers a ready source for prototype and production applications. All military contractors and commercial electronic engineers with stringent environmental conditions will find these carefully rated units ideally suited. For those applications where hermetic sealing is not necessary, we offer the conservative transformer designs of our hermetically sealed line, in drawn steel cases of MIL size and mounting dimensions with phenolic terminal plates and solder lug terminals.

POWER TRANSFORMERS—60 Cycle

ADC offers these standard power transformer designs to cover a wide range of requirements for electronic circuit application. They are available in standard MIL case sizes, hermetically sealed to meet all requirements of MIL-T-27A, Grade 4, Class R, life expectancy X. Maximum operating altitude is 10,000 feet.



The same electrical ratings are also available as commercial grade fully enclosed units for non-military applications in the same MIL case sizes. This version is furnished with a phenolic terminal board and heavy duty solder lug terminals. Mounting screws and tapped inserts provide the same mounting centers as MIL-T-27A versions.

INDUCTORS *FOR MILITARY AND INDUSTRIAL APPLICATIONS*

ADC's line of inductors are circuit running mates to ADC's power transformers. They are available hermetically sealed, to meet MIL-T-27A requirements Grade 4, Class R, life expectancy X. For commercial applications, where hermetic sealing is not necessary, these same ratings are available in MIL cases and mounting dimensions, but with phenolic terminal board and solder lug terminals.

These toroids are readily available in the standard inductance ratings and sizes shown below. Typical characteristics are shown in the curves for each style of core. High inductance values will show an apparent decrease in Q at higher frequencies due to distributed capacitance.

These are hermetically sealed to meet Military specifications in the drawn steel cases shown.

AUDIO TRANSFORMERS FOR MILITARY AND COMMERCIAL APPLICATIONS

"BLUE CHIP" TRANSISTOR TRANSFORMERS *for Printed Circuit Applications*

Five different sizes, from .08 to 1.2 cubic inches with a total of 64 new ratings are listed below to indicate the available power levels for both voice frequency range and extended frequency operation. These ratings take into account not only power handling capacities at minimum frequencies, but also total harmonic distortion under stated conditions. Within the limits shown on the rating charts, variations in both power and distortion levels are possible depending upon the minimum operating frequency.

These units are designed and built to meet MIL-T-27A Grade 5, Class S requirements.

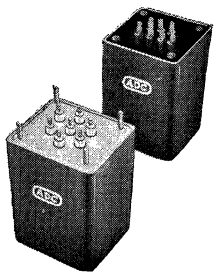
AUDIO TRANSFORMERS *FOR MILITARY AND COMMERCIAL APPLICATIONS*

ADC offers the following designs to cover a wide range of standard audio applications, from low power transistors through heavy duty output circuits. They are conservatively rated at ±½ db from 30 to 15,000 cycles at the maximum rated power. Each is designed for minimum insertion loss, is fully impregnated before potting and rated for dependable continuous duty operation.



These audio transformers are available in standard MIL cases, hermetically sealed to meet all requirements of MIL-T-27A. THE SAME RATINGS ARE ALSO AVAILABLE AS COMMERCIAL GRADE COMPONENTS, featuring the lower cost construction of a phenolic terminal board with solder lug terminals in the same drawn MIL cases.

QUALITY PLUS TRANSFORMERS

For many years ADC has offered these carefully chosen audio transformers which have gained wide acceptance in many quality performance applications. The very conservative ratings are based upon full power operation at 30 cycles, with response from 30 to 15,000 cycles within ½ db. Each is designed for low insertion loss and minimum hum pickup, with hum bucking construction used on all impedance, output and bridging types.

To remain consistent with the many units already in widespread use, these designs are again offered in the standard ADC type 14 case. This features fully enclosed construction in steel or cast cases, with heavy duty silver plated terminals on a phenolic terminal board. Detailed dimensions are shown below.

STANDARD LINE IMPEDANCES

Impedance values shown within parentheses following a higher value, as "600 (150) ohms," indicate the effect of connecting windings in parallel. In either case windings are well balanced, but center tap is available only when both windings are connected in series.

ADC REPEATING COILS

104A—Cord Circuit. This repeating coil is designed to have good transmission efficiency for voice frequencies. Low frequency ringing currents are attenuated and circuit will not ring through. Case is heavy steel to eliminate all cross-talk. Core will not saturate at maximum normal current.

104B—Phantom. The 104B Repeating Coil is a 4-winding coil, for use in phantom circuits. The phantom winding (5-6-7-8) is parallel wound. Heavy Formvar wire is used for maximum surge voltage or lightning protection. This coil has good transmission efficiency at both ringing and voice frequencies.

INDUCTION COILS

103A—Induction Coil is a 2-winding coil for local battery telephones.

103B—Anti-Sidetone Induction Coil is similar to 103A, but with an additional winding for anti-sidetone connection.

103C—Anti-Sidetone Induction Coil is designed for common battery telephone use.

HST TRANSFORMERS

TYPE TT

MINIATURIZED TRANSISTOR TRANSFORMERS

MIL-T-27A, CLASS R
GRADE 5 SPECIFICATION

The HST line of type "TT" Transistor Transformers is the most complete available.

Standard types cover practically all applications: interstage, output, output to line, input, single or push-pull output, reactors, mixing and matching. All designs can be used reversed, input to secondary. The "TT" Series are vacuum molded in green epoxy resin with schematic diagrams and transformer parameters permanently and legibly marked on all units.

Standard 0.10" spacing is used on terminal leads. No bulky clamps are required for mounting, saving valuable board area.

All "TT" Transformers have been tested to the requirements of MIL-T-27A, Class R, Grade 5 specifications. Reliability of operation is insured by continuous reassurance testing. The meticulous plant conditions under which the "TT" series is manufactured insure the maximum quality obtainable. A magnetic shield is available for all TT units. The TT-101 Shield offers approximately 20 db of attenuation. The shield is designed to "snap-lock" onto the unit, or in addition, can be permanently cemented with a drop of epoxy resin.

Type MH | MIL-T-27A

The "MH" transformers illustrated and described on these pages have excellent application in the fields of military electronics, communications, public address systems and anywhere that quality audio components are necessary. The "MH" series transformers and reactors are enclosed in a compact, easy mounting case with glass-to-metal seals to insure reliability of operation. High permeability cores result in excellent frequency response for such small units. All units are furnished in attractive grey finish with schematic diagrams permanently and legibly marked on case.

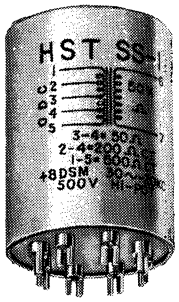
HST TRANSFORMERS

TYPE SS

Space Savers AUDIO TRANSFORMERS



Type SS

SS series Components fill the need for economical, compact, quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing 7/8" in diameter . . . mounting opposite terminal board. SS series items are ideal for portable broadcast, aircraft, mobile service, and similar applications. Additional magnetic shielding (25 db) available by use of SS-17 mu-metal shield. (See photo at middle left.) High-fidelity characteristics are provided, uniform within approximately 1 db from 30 to 20,000 cycles, except for SS-14, SS-15 and units carrying DC which are intended for voice frequencies. All units are furnished in an attractive anodized finish with schematic permanently and legibly marked on the case. (For MIL-T-27A Styles, see HST Type "MH").

The new advanced "MX" series of HST standard toroids provides the highest "Q" factors, inductance stability and linearity obtainable in the industry. Permalloy dust cores are used in all units; core types selected for maximum efficiency at specified frequency ranges. All units are individually adjusted to ±1% tolerance. Enclosures are made of high permeability steel for magnetic shielding.

The TXA series toroids are center tapped for use in "capacitor multiplying tuned circuits," oscillator circuits," etc.

All units are furnished in an attractive grey finish with schematics permanently and legibly marked on cases.

QGC HIGH Q REACTORS

QGC-Reactors are designed for low audio frequency application requiring very high Q and inductance stability. These units are impregnated with a special compound and mounted in **hermetically sealed** cases. A hum reducing lamination structure used in these reactors results in an extremely low pickup of extraneous stray fields. A very low temperature coefficient is achieved by a specially developed impregnation and assembly process. All QGC High Q Reactors have an extremely low voltage coefficient.

All Resistance values are nominal and can vary by ±20%.

Inductance values are given within ±2%.

Closer Tolerances and Inductances other than the standard Catalog items can be supplied on special orders.

Inductance Values up to 400 Henries can be supplied.

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" versus frequency was measured with voltages given by the expression:

$$V = K\frac{\sqrt{LH}}{1H} \times \frac{FKC}{1KC}$$

K—a constant listed in every chart
LH—inductance in Henries
FKC—frequency in kilocycles at which the measurements were made.

2. Variation of inductance versus normalized Direct Current.
The normalized DC is given by

$$In = Idc\sqrt{LH}$$

where Idc is the dc current in MA and LH the inductance in Henries.

3. Variation of Inductance versus normalized AC voltage.
The normalized AC voltage is given by

$$Vn = \frac{V}{\sqrt{LH}} \times \frac{60\ cps}{Fcps}$$

Vn—normalized AC voltage
V—voltage across the coil
LH—inductance in Henries
F—frequency of measurement in cps

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

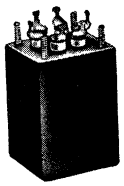
SERIES 1950 NULL "T" FILTERS



The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

Prices on request.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin.** Both hermetically sealed and molded units meet the latest military specification MIL-T-27A (graded 1 or 4 and 2 or 5 respectively). Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores.

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending upon the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

SN Non-stabilized cores, maximum inductance variations ± 2% from −55°C to + 85°C
SE Temperature-stabilized cores, maximum inductance variations + .1% to −.4% from −1.5°C to +54°C
SB Temperature-stabilized cores, maximum inductance variations ± .1% from +13°C to +35°C
SD Temperature-stabilized cores, maximum inductance variations ± .1% from −1.5°C to +54°C
SW Temperature-stabilized cores, maximum inductance variations ± .25% from −54°C to +85°C
SP Temperature stable carbonyl iron cores, maximum inductance variations ± .3% from −55°C to +85°C

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Therefore some coils may have a lower temperature coefficient than the one corresponding to the core stability characteristic. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

2. Self Resonant Frequency F_o:

This frequency is defined as the resonant frequency of L — Inductance and C_d — distributed capacity of the winding. Self resonant frequency may have a variation of ±10% from unit to unit.

3. Nominal and Apparant Inductance:

All toroidal inductors are adjusted at a frequency well below the self resonant frequency "F_o." Since all toroids have a voltage coefficient of inductance they are adjusted with a low A.C. voltage in the region of the initial permeability of the core material.

The apparent inductance at any frequency F is given by the expression

$$L_{app} = \frac{L}{1-\left(\frac{f}{f_0}\right)^2}$$

Where L is the nominal inductance. For frequencies "F" well below the self resonant frequency "F_o" the fractional increase of inductance due to the self resonant frequency is

$$\frac{\triangle L}{L} = \left(\frac{f}{f_0}\right)^2 = w^2 L C_d$$

4. "Q":

The "Q" or quality factor of the coil is shown for every toroid type. Since the "Q" depends both upon the frequency and the A.C. voltage across the coil, the "Q" vs. frequency graphs show the "Q" variations for a given voltage applied across the coil. This voltage is defined by the expression,

$$V = K_q \sqrt{L_H} \times \frac{F_{KC}}{1_{KC}}$$

© U.C.P., Inc.

FREED TRANSFORMER COMPANY, INC.

5. Variations of Inductance vs Normalized A.C. Voltage:

All toroidal inductors have an A.C. voltage coefficient. The variations of inductance vs applied A.C voltage can be computed from the expression of normalized voltage.

$$V_{norm.} = \frac{V}{\sqrt{L_H}} \times \frac{60 \text{ cps.}}{F \text{ cps.}} \times \frac{1}{K_V}$$

V — A.C. voltage across the coil
L_h — Inductance in henries.
F — Measurement frequency in cycles.
K_v — is the voltage coefficient (a variable parameter for different coils) listed in the graph. For high frequency toroids the expression for normalized voltage is changed to,

$$V_{norm.} = \frac{V}{\sqrt{L_H}} \times \frac{1K_C}{F_{KC}} \times K_V$$

6. Variations of Inductance vs Normalized D.C. Current:

The incremental permeability of the coil and consequently the inductance depends upon the magnetizing D.C ampere turns The variations of inductance vs D.C. current can be computed from the expression for the normalized D.C current

$$I_{norm.} = I_{dc} \sqrt{L_H} \times K_i$$

Where I_{dc} — current in M.A. thru the coil
L_h — inductance in henries.
K_I — current coefficient (a variable parameter for different coils) listed in the graph.

7. Maximum Current:

This is the maximum non-destructive current that a coil can tolerate without overheating and consequent failure It is defined as

$$I_{mas} = \sqrt{I^2_{RMS} + I^2_{dc}}$$

The maximum current is listed for each type of toroidal inductors and is computed by dividing the parameter of the numerator by the square root of the inductance in millihenries. This current will affect the inductance value and may partially or completely saturate the inductor. The inductances variations due to I_{dc} and V_{ac} must be computed from the expressions of paragraphs 5 and 6.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied upon request. Our engineering and laboratory facilities are available for consultation, research and development.

FREED MAGNETIC AMPLIFIERS & SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm-up time, long-life components, ease of signal mixing, and hermetic sealing.

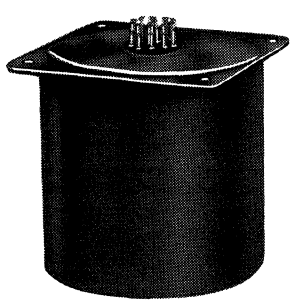
Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast-response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

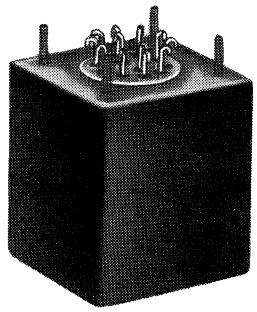
All standard units are designed for continuous operation and will operate in an ambient temperature range of −55°C to +75°C.

Vacuum tube and transistor preamplifiers can be supplied if very high impedance inputs are required.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors and magnetic components.

ALL ITEMS LISTED ARE AVAILABLE FROM STOCK.





FAST RESPONSE FREED MAGNETIC AMPLIFIERS

FREED FILTERS

Freed Standard Filters are **Hermetically Sealed Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and h gh Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

The standard filters are available in Low Pass, High Pass and Band Pass Filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency, 35db or more at 1.5 cut-off frequency and 40 db or more at 2 cut-off frequency.

ILP Interstage Low Pass Filter. Characteristic impedance 10,000 ohms, in and out.

LLP Line Low Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

High Pass Filters: The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency, 35db and 40db or more at 0.67 and 0.5 cut-off frequency.

IHP Interstage High Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LHP Line High Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

Band Pass Filters: The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency 40db or more at 0.5 and 2 center frequency.

IBP Interstage Band Pass Filter. Nominal input impedance — 10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 2:1. (Output voltage to source voltage.)

LBP Line Band Pass Filter. Nominal input impedance 500 to 600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 9:1. (Output voltage to source voltage).

Special filters in all six types are available for any frequency from 200 to 20,000 cycles.

FREED TRANSISTOR CONVERTERS

THE FREED LINE OF HERMETICALLY SEALED DC TO AC AND DC TO DC TRANSISTOR CONVERTERS PROVIDE A HIGH EFFICIENCY VOLTAGE CONVERSION FROM BATTERY SOURCES TO AN AC LINE VOLTAGE OR HIGH DC VOLTAGE WITHOUT THE USE OF MOVING PARTS.

Freed Transformer Co. maintains a stock line of reliable, highly efficient static DC to DC and DC to AC converters.

DC TO DC converters in hermetically sealed cans. RF filters included inside case.

The MAC Line of Static DC to DC and DC to AC Converters provide a highly efficient voltage conversion from battery sources to AC or DC voltage without the use of moving parts.

The output voltage and/or frequency is directly proportional to source voltage variation.

Special regulators can be supplied to compensate for this variation.

- **RUGGED, QUIET, MAINTENANCE FREE, LONG LIFE OPERATION.**
- **HIGH POWER TO WEIGHT RATIO, ARC-FREE OPERATION.**

DC TO DC CONVERTERS

All *TDC* units are Hermetically Sealed, Oil Filled. Mtg. base plate must be mounted on a sink of sufficient area to maintain a base temperature of 70°C. Maximum output regulation 5% from half load to full load. Ripple frequency 4 to 5 KC; Ripple content 0.1%.

VERI & ULTRA MINIATURE TRANSFORMERS

On this page are listed units designed for the extremes in miniaturization. The 4 inch #27 color coded leads supplied are suitable for dip soldering in printed circuits. Thorough baking and resin impregnation assure reliable life. Insulating materials used are compatible for later epoxy potting of complete assemblies. Highest efficiency—space factor obtained by use of high permeability Nickel-Alloy Cores, Nylon Bobbins, Formvar Wire. Available from stock.
